Metropolitan Open Space And Natural Process

Herbert Alfred Swenson

Metropolitan Open Space And Natural Process:

Metropolitan Open Space and Natural Process David A. Wallace, 2016-11-11 Open space in urban regions is fast disappearing but it can still be saved by coordinating man's design with the processes of nature. The authors demonstrate here methods that permit better and more profitable economic and industrial development while raising the quality of life and saving the environment. The problem is all around us. David Wallace observes: As metropolitan areas grow and Megalopolis takes shape before our eyes, nearby open space where nature predominates seems doomed. Forces apparently beyond our control eliminate all traces of an untouched countryside and replace it with thousands and thousands of houses. The pattern of ultimate suburban development finally removes the last vestiges of woods, streams, thickets, and wildlife with the filling of vacant lots carelessly left over from the first great surge of growth. The individual houses that result are perhaps pleasant enough in the micro scale. But unrelievedly continuous urbanization, even in the case where the individual parts are attractive, appalls, bores, and numbs the senses. Must it be this way? This study, based on research at the Institute of Environmental Studies at the University of Pennsylvania, suggests how the process of indiscriminate exploitation of open space can be reversed through understanding and application of natural processes in the environment. When these natural processes are understood, planners can discriminate among land that should be retained as open space in a natural state, land that can stand limited development, and land that can be fully developed without significantly affecting natural processes. Contributors: William G. Grigsby, Ian McHarg, William H. Roberts, Ann Louise Strong, Nohad A. Touloukian, and David A. Wallace.

The Essential Ian McHarg Ian L. McHarg, 2006-11-13 A concise, illuminating collection of essential essays from one of the pioneers of the field of landscape architecture.

Urban Water Planning, a Bibliography Water Resources Scientific Information Center, 1968

Selected Water Resources Abstracts, 1971

[Ian McHarg and the Search for Ideal Order](#) Kathleen John-Alder, 2019-09-17 Ian McHarg and the Search for Ideal Order looks at the well-known and studied landscape architect Ian McHarg in a new light. The author explores McHarg's formative years and investigates how his ideas developed in both their complexity and scale. As a precursor to McHarg's approach in his influential book *Design with Nature*, this book offers new interpretations into his search for environmental order and outlines how his struggle to understand humanity's relationship to the environment in an era of rapid social and technological change reflects an ongoing challenge that landscape design has yet to fully resolve. This book will be of great interest to academics and researchers in landscape architectural history.

Open Space Planning Michael Anthony Carroll, 1966

[To Heal the Earth](#) Ian L. McHarg, 2007-04 Ian L. McHarg's landmark book *Design with Nature* changed the face of landscape architecture and planning by promoting the idea that the design of human settlements should be based on ecological principles. McHarg was one of the earliest and most influential proponents of the notion that an understanding of the processes that form landscapes should underlie design decisions. In *To Heal the Earth*, McHarg has joined with Frederick Steiner, a noted scholar

of landscape architecture and planning to bring forth a valuable cache of his writings produced between the 1950s and the 1990s McHarg and Steiner have each provided original material that links the writings together and places them within the historical context of planning design work and within the larger field of ecological planning as practiced today The book moves from the theoretical beginning with the 1962 essay *Man and Environment* which sets forth the themes of religion science and creativity that emerge and reappear throughout McHarg's work to the practical including discussions of methods and techniques for ecological planning as well as case studies Other sections address the link between ecology and design and the issue of ecological planning at a regional scale covering topics such as education and training necessary to develop the field of ecological planning how to organize and arrange biophysical information to reveal landscape patterns the importance of incorporating social factors into ecological planning and more To *Heal the Earth* provides a larger framework and a new perspective on McHarg's work that brings to light the growth and development of his key ideas over a forty year period It is an important contribution to the literature and will be essential reading for students and scholars of ecological planning as well as for professional planners and landscape architects

Invisible Gardens Peter Walker, Melanie Louise Simo, 1996 *Invisible Gardens* is a composite history of the individuals and firms that defined the field of landscape architecture in America from 1925 to 1975 a period that spawned a significant body of work combining social ideas of enduring value with landscapes and gardens that forged a modern aesthetic The major protagonists include Thomas Church Roberto Burle Marx Isamu Noguchi Luis Barragan Daniel Urban Kiley Stanley White Hideo Sasaki Ian McHarg Lawrence Halprin and Garrett Eckbo They were the pioneers of a new profession in America the first to offer alternatives to the historic landscape and the park tradition as well as to the suburban sprawl and other unplanned developments of twentieth century cities and institutions The work is described against the backdrop of the Great Depression the Second World War the postwar recovery American corporate expansion and the environmental revolution The authors look at unbuilt schemes as well as actual gardens ranging from tiny backyards and play spaces to urban plazas and corporate villas Some of the projects discussed already occupy a canonical position in modern landscape architecture others deserve a similar place but are less well known The result is a record of landscape architecture's cultural contribution as distinctly different in history intent and procedure from its sister fields of architecture and planning during the years when it was acquiring professional status and struggling to define a modernist aesthetic out of the startling changes in postwar America

MetroGreen Donna Erickson, 2012-09-26 In metropolitan areas across the country you can hear the laments over the loss of green space to new subdivisions and strip malls But some city residents have taken unprecedented measures to protect their open land and a growing movement seeks not only to preserve these lands but to link them in green corridors Many land use and urban planning professionals along with landscape architects and environmental advocates have joined in efforts to preserve natural areas *MetroGreen* answers their call for a deeper exploration of the latest thinking and newest practices in this

growing conservation field In ten case studies of U S and Canadian cities paired for comparative analysis Toronto and Chicago Calgary and Denver and Vancouver and Portland among them Erickson looks closely at the motivations and objectives for connecting open spaces across metropolitan areas She documents how open space networks have been successfully created and protected while also highlighting the critical human and ecological benefits of connectivity MetroGreen s unique focus on several cities rather than a single urban area offers a perspective on the political economic cultural and environmental conditions that affect open space planning and the outcomes of its implementation **Urban**
