Techno heaven or techno hell If you believe many scientists working in the emerging fields of twenty first century technology the future is blissfully bright Initially human bodies will be perfected through genetic manipulation and the fusion of human and machine later human beings will completely shed the shackles of pain disease and even death as human minds are downloaded into death free robots whereby they can live forever in a heavenly posthuman existence In this techno utopian future humanity will be saved by the godlike power of technology If you believe the authors of science fiction however posthuman evolution marks the beginning of the end of human freedom values and identity Our dark future will be dominated by mad scientists rampaging robots killer clones and uncontrollable viruses In this timely new book Daniel Dinello examines the dramatic conflict between the techno utopia promised by real world scientists and the techno dystopia predicted by science fiction Organized into chapters devoted to robotics bionics artificial intelligence virtual reality biotechnology nanotechnology and other significant scientific advancements this book summarizes the current state of each technology while presenting corresponding reactions in science fiction Dinello draws on a rich range of material including films television books and computer games and argues

that science fiction functions as a valuable corrective to technological domination countering techno hype and reflecting the weaponized religiously rationalized profit fueled motives of such science. By imaging a disastrous future of posthuman techno totalitarianism, science fiction encourages us to construct ways to contain new technology and asks its audience perhaps the most important question of the twenty first century: is technology out of control?

Battleground: Science and Technology
Peter H. Denton, Sal Restivo, 2008-10-30

The modern world is filled with debate and controversy, and science and technology are the most characteristic features of the modern world. Science and technology are implicated in many, if not all, of the issues, troubles, and problems students are likely to come across in their classes and in their everyday lives. Science and technology serve as a primary pathway to understanding front page headlines on everything from war to AIDS and from oil exploration to global warming. **Battleground: Science and Technology** examines the most hot button issues involving science and technology and provides a balanced assessment of the arguments on all sides of the often strident debates. The approximately 100 issues examined in **Battleground: Science and Technology** include topics in the brain sciences including the controversies over the cause of autism and the reliability of memory, as well as the debates over parapsychology, debates surrounding information technology such as privacy, the impact of video games on social behavior, and the advent of virtual reality. The complexity over drugs and medications such as the testing of the efficacy of medications, the war on recreational drugs, and the costs of pharmaceutical research are also examined. Other hot button topics that are constantly in the news such as evolution and creationism, DNA testing, stem cell research, and genetically modified organisms are also covered. Each entry provides a list of accessible resources useful for further research.

Attack of the Superbugs
