New Evidence In Mndals Research

S Fotheringham, Peter Rogerson

New Evidence In Mndals Research:

New Evidence in MND/ALS Research Frank Clifford Rose,1991 An account of the new evidence accumulating on the aetiology and causes of motor neurone MND amyotrophic lateral sclerosis ALS After considering the clinical presentation of the disease a large section deals with epidemiology from both the geographic and genetic standpoint Current Advances in Amyotrophic Lateral Sclerosis Alvaro Estévez,2013-09-11 Our understanding of the pathology of amyotrophic lateral sclerosis is a continuously changing field New hypotheses are generated with each new discovery they are abandoned to be reanalyzed after some time under the light of new observations This book present a series of reviews from experts in different aspects of the disease focus on these hypotheses There are also a few review chapters providing clear examples of these new observations that make the field to reanalyze previous conclusions **Motor Neurone Disease** Margaret Hunter,Ian Robinson,2005-07-25 A clear and readable guide to both the medical facts related to Motor Neurone Disease and the psychological and social effects on sufferers and those who care for them Includes information on the work of recently set up support organizations *Amyotrophic Lateral Sclerosis, Second Edition* Robert H. Brown,Michael Swash,Piera Pasinelli,2021-12-24 Amyotrophic lateral sclerosis or motor neurone disease is one of the most debilitating and devastating of the neurological diseases The only comprehensive textbook available on the topic this completely reorganized and expanded new edition examines all aspects of ALS from pathology to patient care and provides the reader with a ready reference to help with the difficulties encountered in patient diagnosis and treatment Undoubtedly an important work in the field this book will be of great interest to clinical neurologists and trainees and to all those concerned with the care of people with ALS

Spatial Analysis And GIS S Fotheringham,Peter Rogerson,2013-04-08 Geographic information systems represent an exciting and rapidly expanding technology via which spatial data may be captured stored retrieved displayed manipulated and analysed Applications of this technology include detailed inventories of land use parcels Spatial patterns of disease geodemographics environmental management and macroscale inventories of global resources The impetus for this book is the relative lack of research into the integration of spatial analysis and GIS and the potential benefits in developing such an integration From a GIS perspective there is an increasing demand for systems that do something other than display and organize data From a spatial analytical perspective there are advantages to linking statistical methods and mathematical models to the database and display capabilities of a GIS Although the GIS may not be absolutely necessary for spatial analysis it can facilitate such an analysis and moreover provide insights that might otherwise have been missed The contributions to the book tell us where we are and where we ought to be going It suggests that the integration of spatial analysis and GIS will stimulate interest in quantitative spatial science particularly exploratory and visual types of analysis and represents a unique statement of the state of the art issues in integration and interface **Geomed '97** Lothar Gierl,Andrew Cliff,Alain-Jacques Valleron,Paddy Farrington,Mathias Bull,2012-12-06 A key event in the development of

modern epidemiology was the discovery by the English physician John Snow that cholera is transmitted by contaminated water. During the cholera epidemic in London in 1854, Snow mapped the locations of cholera deaths, observed a cluster of victims in a particular neighbourhood, and found that most of these cases had drunk water from a communal water pump. The handle of the pump was removed at Snow's insistence, and the epidemic ended within a few days. Since these early days, the science of epidemiology has grown into a major discipline with many successes to its credit. Many of the diseases which wreaked havoc in the last century have been brought under control, and in the case of smallpox, eliminated through improvements in hygiene and the use of preventive and control measures such as mass vaccination. Nevertheless, in recent years, new problems have emerged, and old diseases have re-emerged. Many foodborne and waterborne disease outbreaks go unrecognized or are detected too late for effective control measures to be implemented. New infections such as HIV present new threats. Antimicrobial drug resistance, particularly the increase in drug-resistant TB, also poses new challenges.

Regional Science in Business Graham Clarke, Moss Madden, 2013-03-09 Graham Clarke and Moss Madden 1 1

Background In the mid 1990s, there were a number of papers in regional science that questioned the relevance and purpose of the entire sub-discipline. Bailly and Coffey (1994), for example, talked of regional science in crisis. They argued that there were two fundamental problems. First, regional science was too theoretical in the sense that many of its products were models that could neither be calibrated too complex or operationalised too abstract in the real world. They suggested that regional science had not sufficiently demonstrated that it can address real-world problems and subsequently lacked a focus on relevant policy issues. Second, they argued that regional science had become too narrow in focus and had moved away too far from real people and their daily concerns or struggles in life. This was not the first time we had witnessed these sorts of arguments, both from outside the discipline and from within. Sayer (1976) was perhaps the first to argue for a shift from a model-based focus in regional science to one based on political economy. Breheny (1984) criticised the deep ignorance among regional scientists of the nature of practical policy making and implementation. See also Rodwin (1987) for similar views in the mid 1980s. Such self-reflection is a feature of many disciplines as they reach maturity. There have been many similar reflections in geography (Johnston, 1996; Barnes, 1996) and economics (see the collection in the January edition of the *Economic Journal*, 1991).

Recent Advances in Clinical Neurophysiology Jun Kimura, Hiroshi Shibasaki, 1996 Over 200 papers address all aspects of clinical neurophysiology, focusing on fundamentals and major new developments with practical applications. They also review the current clinical applications of established electrophysiologic studies. The special lectures cover the molecular basis of nerve transmission and muscle spindles and the human fusimotor system. Other topics include anterior horn cell disorder and the hyperexcitable state myotonia and periodic paralysis, multimodal non-invasive studies of higher brain functions, assessing pain, peripheral and central fatigue, micro-neurography, electrodiagnosis in children, motor unit number estimates, brainstem reflexes, eye movement disorders, event-related potentials in psychiatric disorders, and sleep.
