

S_N1 / S_N2 / E1 / E2 Reactions of Alcohols

Alcohols can participate in substitution and elimination reactions

BUT... HO^- is a poor leaving group, so in order for alcohols to be **substrates**, acid must be added (to give the better leaving group OH_2^+)

R-OH is a poor nucleophile, so adding **base** gives the **alkoxide** RO^- that is a much better nucleophile

In each of these reactions, you're given the first step. **Draw what happens next!**

Reactions To The Master:

Reactions to the Master Francis Ames-Lewis, 2017-09-29 The immense effect that Michelangelo had on many artists working in the sixteenth century is widely acknowledged by historians of Italian Renaissance art Yet until recently greater stress has been placed on the individuality of these artists styles and interpretation rather than on the elucidation of their debts to others There has been little direct focus on the ways in which later sixteenth century artists actually confronted Michelangelo or how those areas or aspects of their artistic production that are most closely related to his reveal their attitudes and responses to Michelangelo s work *Reactions to the Master* presents the first coherent study of the influence exerted by Michelangelo s work in painting and sculpture on artists of the late Renaissance period including Alessandro Allori Agnolo Bronzino Battista Franco Francesco Parmigianino Jacopo Pontormo Francesco Salviati Raphael Giorgio Vasari Marcello Venusti and Alessandro Vittoria The essays focus on the direct relations such as copies and borrowings previously underrated by art historians but which here form significant keys to understanding the aesthetic attitudes and broader issues of theory advanced at the time

Essential Zebrafish Methods: Genetics and Genomics H. William Detrich III, Leonard I. Zon, Monte Westerfield, 2009-09-05 Due to its prolific reproduction and the external development of the transparent embryo, the zebrafish is the prime model for genetic and developmental studies as well as research in genomics. While genetically distant from humans, nonetheless, the vertebrate zebrafish has comparable organs and tissues that make it the model organism for study of vertebrate development. This book, one of two new volumes in the Reliable Lab Solutions series dealing with zebrafish, brings together a robust and up to date collection of time tested methods presented by the world's leading scientists. Culled from previously published chapters in Methods in Cell Biology and updated by the original authors where relevant, it provides a comprehensive collection of protocols describing the most widely used techniques relevant to the study of zebrafish genetics and genomics. The methods in this volume were hand selected by the editors whose goal was to provide a handy and cost effective collection of fail safe methods, tips, and tricks of the trade to both experienced researchers and more junior members in the lab. Provides busy researchers a quick reference for time tested methods and protocols that really work.
