## **Reader In Technical Services:**

**Library Technical Services** Stacey Marien, 2020-08-15 Libraries are experiencing major changes concerning the role of technical services. Technical services librarians also are being challenged about their relevance and role sometimes revealed by a lack of understanding of the contribution technical services librarians make to building and curating library and archival collections. The threats are real: relocation from central facilities, the dramatic shift to electronic resources, budgetary constraints, and outsourced processing. As a result, technical services departments are reinventing themselves to respond to these and similar challenges while embracing innovative methods and opportunities to advance librarianship in the twenty-first century. *Library Technical Services* provides case studies that highlight difficult realities yet embrace exciting opportunities such as space reclamation, evolving vendor partnerships, metadata retraining, and managing personnel, special collections, and distance education. Written for catalog and metadata librarians and managers of technical services units, this book will inspire and provide practical advice and examples for solving issues many libraries are facing today.

**Introduction to Technical Services** G. Edward Evans, Sheila S. Intner, Jean Weihs, 2010-11-11 Used in library schools worldwide, this standard text provides students with a thorough understanding of technical services. Updated and expanded, the eighth edition further emphasizes the rapidly changing environment in which technical services are conducted. The book covers all aspects of the field from acquisitions to managing the cataloging department with five new chapters. *Technical Services Issues* includes material related to physical space needs. *E resources Issues* examines how the growth of e materials impact technical services work. *Copy Cataloging* reflects the ever-increasing need to be more efficient and also to save limited funds for technical services activities. *Overview and Decisions* addresses the issue of why and how the local OPAC has become a gateway to the universe of knowledge. *Processing Materials* covers the activities involved in making sure items that go into a library's collection are properly identified as belonging to the library and where the item is physically located in the collection. All other chapters have been extensively rewritten and updated to reflect 2010 technical service functions and activities. Complete with helpful illustrations, statistics, and study guide questions, this text is a must for library and information science students.
