## **Reading Disabilities Genetic And Neurological Influences:**

*Reading Disabilities* B. Pennington, 2012-12-06 This book is unique in that it brings together in one place an account of recent advances in our understanding of the biology of dyslexia It grew out of a Rodin Remediation Foundation International conference held on this topic in Boulder Colorado in 1990 which included most of the world's experts on the genetics and neurology of dyslexia Ten years ago a volume on this topic would scarcely have been possible and now we have an emerging comprehensive neuroscientific understanding of this complex behavioral disorder that goes from genes to brain to behavior Building on recent advances in the understanding of the cognitive phenotype of dyslexia these authors present new data on both the etiology and brain mechanisms underlying that phenotype Reading disability or dyslexia has a high familial recurrence rate and is partly heritable Genetic linkage studies are beginning to identify the possible locations of genes influencing this phenotype On the neurological side several independent studies have found neuroanatomical differences in the dyslexic brain which are due to early changes in brain development Thus contrary to the views held by some educators that dyslexia is a myth the results presented in this book firmly establish dyslexia as a real biological condition This book is relevant to researchers and practitioners concerned with both normal and abnormal reading development

*Neural Development and Schizophrenia* Sarnoff A. Mednick, J. Meggin Hollister, 2012-12-06 This is the third meeting we have organized which has explored the meaning of fetal neural developmental disruption in the etiology of schizophrenia The first was sponsored by the Schizophrenia Research Branch with the scientific cooperation of Dr David Shore We met in Washington the output of the meeting was published in a book entitled *Fetal Neural Development and Adult Schizophrenia* Cambridge University Press 1991 The next meeting was an Advanced Research Workshop sponsored by NATO and was held at n Ciocco Castelveccchio Pascoli This meeting was reported in a NATO volume *Developmental Neuropathology of Schizophrenia* and was edited by Mednick Cannon Barr and La Fosse The current meeting has noted several advances in the field There are additional psychiatric illnesses which have been found to be related to maternal viral infection in the second trimester There have been studies reported which have definitely observed a viral infection in the mothers of fetuses who later evidenced schizophrenia More evidence has been published which has replicated the second trimester effect In the future studies will be wise to provide serological evidence of a viral infection and information on the precise viruses involved Another important step will be to determine whether second trimester maternal viral infection is related to a behavioral deficit in the infant If neural development has been compromised it might be possible to detect deficits in the infant with the proper measures We look forward to future meetings at which these new areas might be explored

**Toward A Genetics of Language** Mabel L. Rice, 2013-02-01 The past decade has brought important new advances in the fields of genetics behavioral genetics linguistics language acquisition studies of language impairment and brain imaging Although these advances are each highly relevant to the determination of what a child is innately prepared to bring to language acquisition the contributing fields of endeavor have traditionally been relatively self contained with little cross communication This volume was developed with the belief that there is considerable value to be gained in the creation of a shared platform for a dialogue across the disciplines Leading experts in genetics linguistics language acquisition language impairment and brain imaging are brought together for the purpose of exploring the current evidence theoretical issues and research challenges in a way that bridges disciplinary boundaries and points toward future developments in the search for the genetic and environmental bases of language acquisition and impairments This collection provides discussions and summaries of breakthrough findings of the genetic underpinnings of dyslexia theoretical and empirical developments in the specification of a phenotype of language acquisition and impairment evidence of familiarity and twin concordances of specific language impairment and new evidence from brain imaging It concludes with a critical response from an advocate of rational empiricism
