Motivation, Beliefs, and Organizational Transformation Raymond T. Butkus, Thad B. Green, 1999-06-30 Why does management encounter people problems whenever organizations attempt to change Green and Butkus say this occurs because organizations overlook one of the most critical problems of change how employees react it emotionally Change is not about work processes or information systems alone It is also about what people believe and feel emotions such as anger anxiety confusion and fear Yet managers are usually unaware of these things and those who are aware usually lack skills to manage these emotions effectively They tend to rely on traditional incentive systems which usually do not work What does work The one approach that has been applied consistently with positive results is Green's belief system of motivation and performance Green and Butkus show how the belief system helps to bring negative feelings and convictions to the surface They provide ways to identify the underlying emotional problems and find effective solutions The belief system works say the authors because it goes directly to the source of the problem employees themselves to discover why motivation and performance problems occur and what can be done to solve them This book describes applications of the belief system in a variety of work situations including a recent effort at organizational transformation with AT T's Business Communications Services BCS Division It outlines in detail the process that BCS used to implement the belief system starting at the highest management levels and cascading down to the organization's front lines With a clear exposition of the belief system's theoretical underpinnings and nuts and bolts methods Green and Butkus provide executive decision makers and planners throughout the organization with critical insights into the pitfalls in the implementation process and workable guidance on how to avoid them

Re-engineering the Uptake of ICT in Schools Frans Van Assche, Luis Anido, David Griffiths, Cathy Lewin, Sarah McNicol, 2015-08-11 This book reports on a novel and comprehensive approach to the uptake of ICT in Schools. It focuses on key questions: pedagogically sound ways of introducing ICT; new technical artifacts supporting the approach; the evaluation in a large scale validator; and future work. While many innovations in Technology Enhanced Learning (TEL) have emerged over the last two decades, the uptake of these innovations has not always been very successful, particularly in schools. The transition from proof of concept to integration into learning activities has been recognized as a bottleneck for quite some time. This major problem, which is affecting many TEL stakeholders, is the focus of this book, which focuses on developing a more effective and efficient approach based on more than 2500 pilots in European classrooms. Teachers, head teachers, and policy makers may benefit from reading how novel learning scenarios can be elaborated, adapted to a local context, and implemented in the classroom; how new technologies can support this process for teachers and their national/regional communities; how teachers and other stakeholders can be educated in such a re-engineering process; how the approach can be scaled up through MOOCs, ambassador schemes, and trainer programs; how future classroom labs can inspire teachers, head teachers, and policy makers; how teachers and, above all, learners can become more engaged in learning through the adoption of the iTEC approach. Readers with a more technical focus may also be interested in the discussion of recommender systems, the flexible provision of resources and services, the deployment of the cloud in schools, and systems for composing technological support for lesson plans.

[Lean Production for Competitive Advantage](#) John Nicholas, 2015-10-08 The Lean concepts and principles described in this book have revolutionized manufacturing practice and business conduct in a manner similar to what Henry Ford's system did for mass manufacturing. Lean production, however, involves much more than the adoption of methods and procedures; it requires a change in management philosophy that emphasizes relationship building, trust, and responsibility being conferred to frontline workers and suppliers. Based on three decades of teaching experience, *Lean Production for a Competitive Advantage: A Comprehensive Guide to Lean Methodologies and Management Practices* introduces the Lean philosophy and illustrates the effective application of Lean tools with real-world case studies. From fundamental concepts to integrated planning and control in pull production and the supply chain, the text provides a complete introduction to Lean production. Coverage includes small batch production, setup reduction, pull production, preventive maintenance, standard operations, as well as synchronizing and scheduling lean operations. Detailing the key principles and practices of Lean production, the text also illustrates effective implementation techniques with case studies from a range of industries. Includes questions and completed problems in each chapter. Explains how to effectively partner with suppliers and employees to accomplish productivity goals. Designed for students who have a basic foundation in production and operations management, the text provides a thorough understanding of the fundamental principles of Lean. It also offers practical know-how for

implementing a culture of continuous improvement on the shop floor or in the office creating a heightened sense of responsibility and pride in all stakeholders involved and enhancing productivity and efficiency to improve the bottom line Instructor's material available please contact orders taylorandfrancis.com or call 1 800 634 7064 to request these materials
