## Referential Transformations:

**Formalisms for Reuse and Systems Integration** Thouraya Bouabana-Tebibel, Stuart H. Rubin, 2015-03-27 Reuse and integration are defined as synergistic concepts where reuse addresses how to minimize redundancy in the creation of components while integration focuses on component composition Integration supports reuse and vice versa These related concepts support the design of software and systems for maximizing performance while minimizing cost Knowledge like data is subject to reuse and each can be interpreted as the other This means that inherent complexity a measure of the potential utility of a system is directly proportional to the extent to which it maximizes reuse and integration Formal methods can provide an appropriate context for the rigorous handling of these synergistic concepts Furthermore formal languages allow for non ambiguous model specification and formal verification techniques provide support for insuring the validity of reuse and integration mechanisms This edited book includes 12 high quality research papers written by experts in formal aspects of reuse and integration to cover the most recent advances in the field These papers are extended versions of some of the best papers which were presented at the IEEE International Conference on Information Reuse and Integration and the IEEE International Workshop on Formal Methods Integration both of which were held in San Francisco in August 2014 A Sociosemiotic Theory of Theatre Jean Alter, 2015-09-30 Analyzes the basic duality of theatre the play is happening on a stage but the story is happening at some other place and time exploring how the two aspects both compete and complement each other and suggesting the social factors that impact the total process *Computer Vision Systems* Bernt Schiele, Gerhard Sagerer, 2003-05-15 Following the highly successful International Conference on Computer Vision stems held in Las Palmas Spain ICVS 99 this second International Workshop on Computer Vision Systems ICVS 2001 was held as an associated workshop of the International Conference on Computer Vision in Vancouver Canada The organization of ICVS 99 and ICVS 2001 was motivated by the fact that the jority of computer vision conferences focus on component technologies However Computer Vision has reached a level of maturity that allows us not only to p form research on individual methods and system components but also to build fully integrated computer vision systems of signi cant complexity This opens a number of new problems related to system architecture methods for system synthesis and veri cation active vision systems control of perception and tion knowledge and system representation context modeling cue integration etc By focusing on methods and concepts for the construction of fully integrated vision systems ICVS aims to bring together researchers interested in computer vision systems Similar to the previous event in Las Palmas ICVS 2001 was organized as a single track workshop consisting of high quality previously unpublished papers on new and original research on computer vision systems All contributions were presented orally A total of 32 papers were submitted and reviewed thoroughly by program committee members Twenty of them have been selected for p sentation We would like to thank all members of the organizing and program committee for their help in putting together a high quality workshop Kelly L.
