1 | INTRODUCTION

Some 50 years ago, and befittingly at an AAPA dinner, Stanley Garn delivered the Presidential Address, which he titled Nutrition in Physical Anthropology. In his address, Garn predicted, "a concern with nutrition in its broadest sense, including the physical form of the dietary and the energy balance will occupy us more rather than less in the years to come, as we channel our interests to ascertain the directions of evolutionary and physiological change..." (Garn, 1966). He specifically mentioned the nutritional underpinning of our interests in the evolution of the genus *Homo*, the diets of nonhuman primates, child growth, and sexual maturation, secular changes in adult body size, and growing evidence that obesity was replacing malnutrition in some populations.

In this essay, we will take up Garn's prediction and review the themes related to human nutrition that occupy us in 2018. We define nutrition broadly: the consumption of food and the effect of food energy and nutrients on body size, health, and function. Nutrition is an area of interest shared with nutritional scientists and public health professionals, but the anthropological lens provides a view that is more comparative and evolutionary. As biological anthropologists, we are interested in the nutrition of a wide range of contemporary populations, as well as that of historic and prehistoric populations and the hominins in our evolutionary past. We consider nutrition as a key environmental factor in shaping human variability and evolution, and use the principles of evolution to explain variation between populations in the present as well as the past. We also recognize the inseparable nature of human cultural and biological adaptation to the environment, and hence use the explanatory frameworks referred to as biocultural or biobehavioral to address the biological-cultural nexus in studying nutrition.

Three thematic areas have been prominent in the research of biological anthropologists in the past decade: diet in the evolution of the genus *Homo*, diet and nutrition in the transition from hunting and gathering to agriculture, and diet and nutrition in the current era of globalization. These thematic areas are defined by the time-period of interest and questions asked, but each is viewed as a transition in diet with measurable outcomes in terms of morphology and/or health. In the Paleolithic, major questions revolve around changes in the dietary niche of *Homo*, specifically the availability of dietary energy that enabled significant changes in the morphology (body size and brain size) observed. In the Neolithic, it is clear that the transition from foraging wild plant and animal species to the production of food via agriculture and animal husbandry changed the dietary niche in very significant ways. The timing and pace of this transition varied across geographic regions with the earliest dates at about 10,000 BCE. Questions of interest are related to how changes in nutritional ecology impacted body morphology and health in different geographical regions. In the current era, transitions in diet are associated with processes of industrialization and globalization that result in increases in food availability. Almost all human populations find themselves at some stage of this newest nutrition transition. Questions of interest revolve around the timing and pace of the transition in different populations, and the linkages between the changes in diet and the changes in body size, composition, and risk of chronic disease.

Here we will consider each of the three thematic areas in turn. First, we will highlight major points in their historical development. Second, drawing on the research of biological anthropologists in the past decade, we will provide illustrative examples of each of these themes. We note, however, that given the interdisciplinary nature of current research, many people are associated with more than one

Meta-Philosophical Reflection on

Feminist Philosophies of Science Maria Cristina Amoretti,Nicla Vassallo,2015-12-21 This volume offers a meta philosophical reflection on feminist philosophies of science It emphasizes and discusses both the connections and differences between traditional philosophies of science and feminist philosophies of science The collection systematically analyses feminist contributions to the various philosophies of specific sciences Each chapter is devoted to a specific area of philosophy of science general philosophy of science philosophy of biology philosophy of climate sciences philosophy of cognitive sciences and neurosciences philosophy of economics philosophy of history and archaeology philosophy of logic and mathematics philosophy of medicine philosophy of psychology philosophy of physics and philosophy of social sciences Since some of these areas have so far rarely been addressed by feminist philosophers this new collection provides new angles and stimulates the debate on pivotal issues that are part and parcel of both traditional philosophies of science and feminist philosophies of science Using a range of different methodologies and styles the essays all show great clarity in both arguments and contents

Reflecting on Teaching Practice and Learner Engagement Anjoom A. Mukadam , 2020-05-04 Student Empowerment in Higher Education brings together the accumulated knowledge and experience of many accomplished teachers and students from higher education institutions around the world and has much to offer those who are engaged in higher education as students teachers or support staff The authors offer personal reflections in teaching learning mentoring assessment hands on activities course design and student

identities in higher education across the globe supported by academic research and scholarship Readers are provided with a window into tried and tested empowering practices in varying contexts enabling them to see what works and what does not alongside the challenges and possibilities A distinctive feature of this book and its paramount strength is that it explores best practices in student empowerment whilst reflecting on matters of teaching and learning that are familiar to students and teachers alike and also explores practices in a variety of disciplines The intention of these volumes therefore is not only to inform readers about the diverse learning and teaching approaches of the authors but most importantly to facilitate processes of student empowerment and promote reflection on teaching and learning practices In recent decades higher education policy discourse has persistently implied that a university education is delivered to students under the impersonal banner of the student experience Not only does this commodify the diverse individual experiences of students into one marketable product it also creates false barriers and power dynamics between students and their teachers In *Student Empowerment in Higher Education* the students and lecturers who collaborated to write this important volume have literally blown such misleading notions out of the window I highly recommend each varied and autonomous chapter to learn what really inspires confidence and success in university students Professor Sarah Hayes Professor of Higher Education Policy University of Wolverhampton The two volumes of *Student Empowerment in Higher Education* offer the reader rich and varied examples and understandings of student empowerment from around the world The authors provide reflective accounts of learning and teaching from diverse perspectives and disciplines which focus on many different areas of practice in higher education It is this variety that will appeal to many readers as the source of ideas and inspiration for numerous possible routes to empowerment With many chapters co authored by students and staff the book models the collective responsibility students and staff have for enhancing student empowerment Dr Catherine Bovill Senior Lecturer in Student Engagement University of Edinburgh Fulbright Scholar Elon University North Carolina USA Visiting Fellow Knowledge Exchange University of Winchester
