Regeneration In Animal And Related Problems By Kiortsis:

Regeneration in Animals and Related Problems North Atlantic Treaty Organization. Scientific Affairs Division, 1965
Principles of Regeneration Richard J. Goss, 2013-09-12 Principles of Regeneration focuses on the principles methodologies and changes involved in the process of regeneration The book first underscores the nature of the nucleus in Acetabularia enzyme effects role of ribonucleic acid in morphogenesis and functions of the stentor The text then takes a look at the turnover in hydroids and flatworms and regeneration blastema Discussions focus on regeneration in hydra interstitial cells colonial hydroids neoblasts and morphogenetic fields The publication surveys segmental addition in annelids and molting metamorphosis and regeneration in arthropods The termination of regeneration importance of nerves morphogenesis histogenesis of the regenerate and role of the nerves are discussed The manuscript also examines regeneration in fishes amphibian limb horns and antlers and heads and tails The manuscript is a dependable source of data for students of developmental biology anatomy and evolution as well as teachers and researchers in biology and medicine The Cell Surface in Embryogenesis and Carcinogenesis Sanders, 1989-11-15 This book covers recent trends in the study of cell surfaces cell interactions and cell behavior during selected events in development and cancer It relates current thrusts in molecular biology to more cellular aspects of these fields and draws parallels between advances in developmental biology malignant invasiveness wound healing and regeneration The book opens with a discussion of a number of developmental events stressing the importance of the cell surface and extracellular matrix to morphogenesis cell locomotion and invasiveness Basement membranes are discussed in terms of their activity as substrata for cell movement barriers to invasion and their role in epithelial mesenchymal interactions These aspects of cell cell and cell matrix interaction are directly compared with developmental and neoplastic events emphasizing the epithelial to mesenchymal transformations that are common to both of these situations Other topics discussed include cell surface considerations cell cell adhesion cell substratum adhesion as well as a discussion regarding how these topics are relevant to the cell biology of wound healing and regeneration This book is ideal for researchers and students in biology cell biology biochemistry molecular biology anatomy zoology and medicine Control of Growth and Metamorphosis Penelope M. Jenkin, 2017-05-03 International Series of Monographs in Pure and Applied Biology Zoology Division Volume 47 Control of Growth and Metamorphosis details the differences in animal hormones The title focuses on covering morphogenetic hormones The selection first defines and classifies morphogenetic hormones and then proceeds to detailing the sources of hormones related to morphogenesis Next the selection tackles growth and mitosis along with molting and metamorphosis The last chapter deals with the control of morphogenetic hormones The book will be of great use to students researchers and practitioners of zoology **Advances in Morphogenesis** M. Abercrombie, Jean Brachet, Thomas J. King, 2013-10-22 Advances in Morphogenesis Volume 10 provides an overview of the state of knowledge in morphogenesis The book contains six chapters and opens with a discussion of the

organization center of the amphibian embryo This is followed by separate chapters on physiological gradients in development molecular embryology of the sea urchin mollusks and other invertebrates and changes in DNA RNA and protein during successive phases of embryonic development in vertebrates Subsequent chapters deal with the control of growth in the filamentous prothalli and the causal factors promoting the transition to the two dimensional gametophyte and the development inheritance and origin of the plastid in Euglena Planarian Regeneration H. V. Brøndsted, 2013-10-22

Planarian Regeneration deals with regeneration problems including embryogenesis and morphogenesis The book compares the principles involved in the regeneration processes with those in ontogenesis from the egg The author also reviews the works of Thomas H Morgan and Charles M Child which became the basis for systematic scientific investigation of regeneration The head regenerates vigorously with a faster rate behind the eyes then at various levels along the longitudinal axis of the planarian body A time graded regeneration includes inhibitory forces and some genetic codes that determine such rate The time graded field has been proven by transplantation experiments the author addresses the morphological structure to which biochemical factors or processes determine the different rate of regeneration He notes that the nervous system conforms to these processes as shown by studies of Lender and Klein 1961 The author suggests that the study of regeneration in planarians should involve time considerations quantitatively to explain some substance if any from the nervous system that activates the cytoplasm of neoblasts and then the genome This book will prove valuable for zoologists and researchers in genetics biochemistry or molecular biology **Horns, Pronghorns, and Antlers** George A.

Bubenik, Anthony B. Bubenik, 2012-12-06 Since the first drawings left on walls of ancient caves human beings have been fascinated with that unique phenomenon of the animal kingdom the presence of horns and antlers From the mythical unicorn exercising the power over life and death to the perceived aphrodisiacal and other medical properties of rhinoceros horns and growing antlers these conspicuous protuberances have had a significant place in the history of mankind Part of that ancient interest in antlers and horns was due to their value as symbols of masculinity this interest persists today in trophy hunting an honorable tradition carried on for centuries in many countries of the world This book which deals with evolution morphology physiology and behavior has not been devised as a comprehensive review of the subject of horns prong horns and antlers rather it is a series of chapters stimulating thoughts discussions and initiation of new studies As editors we did not interfere with the content of articles nor with the opinions and interpretations of our contributors and we left them to decide whether to accept the suggestions of our reviewers Despite the fact that various aspects of cranial appendages have been studied since the end of the eighteenth century many controversial views still exist as witnessed in various chapters of this book The Regeneration of Axolotl Limbs from Dissociated, Randomly-mixed Blastema Cells Daiga Anita Dunis, 1976
