The Mechanosensory Lateral Line Sheryl Coombs, Peter Görner, Heinrich Münz, 2012-12-06 This volume represents the published proceedings of an international conference on the Neurobiology and Evolution of the Mechanosensory Lateral Line System held August 31 to September 4 1987 at the Center for Interdisciplinary Research at the University of Bielefeld West Germany The goal of this conference was to bring together researchers from all over the world to share information about a major aquatic sensory system the evolution and function of which have largely remained an enigma since the 18th century The lateral line or lateralis system has been used as an umbrella term to describe what originally without the aid of modern anatomical techniques looked like a series of pits grooves and lines on the head and trunk of fishes and some amphibians For at least the past 30 years however it has been recognized that the lateralis system comprises not one but at least two functional classes of receptors mechanoreceptors and electroreceptors The relative ease with which the appropriate stimulus could be defined and measured for the electroreceptive class has resulted in an explosion of information on this submodality during the past 20 years As a result there is little ambiguity about the overall function of the electrosensory system now generally regarded as an independent system in its own right A similarly clear definition for the function of the mechanosensory lateralis system has not been as forthcoming

Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts.
