Seeing Contour And Colour:

Seeing Contour and Colour J. J. Kulikowski, C. M. Dickinson, I. J. Murray, 1989 **The Visually Responsive Neuron** T. Philip Hicks, S. Molotchnikoff, Taketoshi Ono, 1993 This timely new volume presents broad based and wide ranging contributions on all aspects of vision The material is grouped for presentation in a logical fashion in five main themes peripheral processing sensory integration in superior colliculus organization of visual projections development and plasticity and neuronal encoding and visually guided behavior The material spans from molecules to cognition including overt behavior and synaptic and membrane levels of analysis The species studied also range over diverse phyla while contributors too form a diverse group representing Europe North America and Asia The Visually Responsive Neuron is an exciting and informative addition to the well known Progress in Brain Research series Colour Vision Deficiencies XII B. Drum, 2012-12-06 From the 98 presentations of the XIIth Symposium on Colour Vision Deficiencies 61 were selected after peer review and revision by the authors In addition to these contributions this volume contains a cumulative index to all authors in the IRGCVD proceedings since the first one in 1968 including the present volume The contents include contributions on basic questions of anatomical and electrophysiological organisation of the neural pathways underlying colour vision and on ways in which disturbances of these pathways can produce acquired colour vision deficiencies Further contributions deal with genetics and congenital red green colour deficiencies and colour vision testing The resulting publication contains much of interest to basic vision scientists as well as to specialists in colour vision deficiencies Colour Vision Deficiencies X B. Drum, J.D. Moreland, A. Serra, 2012-12-06 Since its inception the International Research Group on Colour Vision Deficiencies IRGCVD has followed the policy that the Symposium Proceedings should be as close as possible to a complete record of the scientific content of the meeting This policy has the advantage of providing an accurate picture of the current state of the art in research on color vision deficiencies but it also has the disadvantage that papers typically span a wide range of quality In this volume however we have instituted a system of peer review in an effort to enhance scientific quality as much as possible while continuing our past policy of publishing all submitted manuscripts In addition to being edited for English composition and grammar each of the papers included here has been carefully reviewed by an IRGCVD member selected for his or her expertise in the specific topic of the paper Reviewers were instructed to include in their comments suggestions for improvement rather than recommendation or rejection In our opinion this review process recommendations for publication has resulted in substantial improvement of many of the articles and has enhanced the value of the publication We are pleased to acknowledge the efforts of our reviewers and offer them our sincere thanks for their important contributions to Colour Vision Deficiencies X The Editors B Drum J D Moreland A Serra eds Colour Vision Deficiencies X p xiii **Representations of Vision** Andrei Gorea, 1991-04-26 This stimulating volume on vision extends well beyond the traditional areas of vision research and places the subject in a much broader philosophical context The emphasis throughout is to integrate and

illuminate the visual process The first three parts of the volume provide authoritative overviews on computational vision and neural networks on the neurophysiology of visual cortex processing and on eye movement research Each of these parts illustrates how different research perspectives may jointly solve fundamental problems related to the efficiency of visual perception to the relationship between vision and eye movements and to the neurophysiological codes underlying our visual perceptions In the fourth part leading vision scientists introduce the reader to some major philosophical problems in vision research such as the nature of ultimate codes for perceptual events the duality of psycho physics the bases of visual recognition and the paradigmatic foundations of computer vision research Colour Vision Evan Thompson,2003-09-02 Thompson provides an accessible review of the current scientific and philosophical discussions of colour vision and is vital reading for all cognitive scientists and philosophers whose interests touch upon this central area *Modulation of Neuronal Responses* Giedrius T.
