Segmental Motor System:

The Segmental Motor System Marc D. Binder, Lorne M. Mendell, 1990 This volume presents a broad range of knowledge about the organization of the segmental motor apparatus of mammals Over the past 30 years the mammalian segmental motor system has served as a template for research on neural trophism synaptic function and connectivity neuronal recognition and neuronal modeling and has provided the definitive neural aggregation the motoneuron pool In addition a number of important experimental and analytical techniques including intracellular recording signal averaging linear systems analysis conditioning testing spatial facilitation and occlusion and excitability testing have emerged from this body of research to become important components of the experimental armamentarium of biologists working throughout the nervous system The book acknowledges the seminal contributions of Professor Elwood Henneman to this field and to neuroscience in general and provides a systematic discussion of some of the fundamental contemporary issues in motor control It addresses such questions as the intrinsic properties of motoneurons and muscle fibers the phenomenon of orderly motor unit recruitment and its underlying mechanisms the neural mechanical correlations between motoneurons and the muscle units the innervation and the analysis of synaptic inputs to motoneuron pools In focusing on these issues the volume not only provides comprehensive coverage of the functional organization of the motoneuron pool and its target skeletal muscle but also illuminates the extensive ramifications that research in this area has had on neurobiology

Motor System Disorders, Part I David S. Younger, 2023-08-08 Motor System Disorders Normal Physiology and Function and Neuromuscular Disorders summarizes recent advances and best practice for understanding normal physiology and function of the larger motor system as well as the diagnosis course and treatment of neuromuscular disorders The work will include neuroanatomy circuits and synapses It discusses how different parts of the brain contribute to motor control including both vestibular and cerebellar motor control as well as the influences of the parietal and frontal lobes Diagnostic methods include genetic evaluation electrodiagnosis pathology and brain imaging Neuromuscular disorders of both children and adults will be included Identifies normal motor control physiology and function including neuroanatomy circuits and synapses Discusses vestibular and cerebral motor control and contributions of parietal and frontal lobes Provides diagnostic methods including genetic evaluation electrodiagnosis brain imaging and pathology analyses Summarizes the diagnosis course and best practice treatment of neuromuscular disorders Explores neuromuscular disorders in adults and children

The Head-neck Sensory Motor System A. Berthoz, Werner Graf, Pierre Paul Vidal, 1992 This is the most comprehensive and up to date account of the control of vertebrate head movements and its biomechanical and neural basis It covers the entire spectrum of research on head neck movements ranging from the global description and analysis of a particular behavior to its underlying mechanisms at the level of neurotransmitter release and membrane biophysics

Peripheral and Spinal Mechanisms in the Neural Control of Movement M.D. Binder, 1999-12-17 In the last decade we have witnessed a striking maturation of

our understanding of how neurons in the spinal cord control muscular activity and movement Paradoxically a host of new findings have revealed an unexpected versatility in the behavior of these well studied neural elements and circuits In this volume the world s leading experts review the current state of our knowledge of motor control outline their latest results and developments and delineate the seminal unresolved questions in this vibrant field of research The volume begins with a commentary and overview of our current understanding of the peripheral and spinal basis of motor control The remainder of the volume is divided into seven sections each focused on a different problem The first chapter in each section provides some historical review and presages the experimental findings and hypotheses that are discussed in subsequent chapters Topics include the biomechanics of neuromuscular systems the properties of motoneurons and the muscle units they control spinal interneurons pattern generating circuits locomotion descending control of spinal circuits comparative physiology of motor systems and motor systems neurophysiology studied in man The book serves as a unique reference volume and should be essential reading for anyone interested in motor systems Moreover the volume s comprehensive coverage of a wide range of topics make it an effective textbook for graduate level courses in motor control neurobiology kinesiology physical therapy and rehabilitation medicine

Alpha and Gamma Motor Systems R. Durbaba,M.H. Gladden,Anthony Taylor,2012-12-06 The Sherrington School of Physiology at St Thomas Hospital provided a natural venue for four days of enthusiastic debate on Sherrington s Final Common Path the alpha motoneurone and related matters Sherrington himself held a lectureship at St Thomas just over a century ago The occasion was a happy one Most participants already knew each other the topics were familiar the discussion was vigorous and critical but without personal rancor The program had set out to encourage debate with critiques both of the oral papers and the posters their inclusion in the present volume helps to show where we are standing on rock rather than sand In spite of a venerable history some surprisingly simple matters remain controversial such as the information content of the signals from the Golgi tendon organs To those working on alpha and gamma motoneurons and their control this volume provides an essential up dating Classical problems continue to be attacked on a broad front advance is steady and continuous a swelling tide rather than a sudden view of the summit But in some sectors the difficulties are so great that to the outsider little might seem to change the same battles continuing but even here the terms of debate change and consensus develops Other branches of biology claim breakthrough upon breakthrough from the routine application of the new technologies so we have to be the first to ask whether our classical approach to science can still be justified

Stuart, 2012-12-06 This collection of contributions on the subject of the neural mechanisms of sensorimotor control resulted from a conference held in Cairns Australia September 3-6 2001 While the three of us were attending the International Union of Physiological Sciences IUPS Congress in St Petersburg Russia in 1997 we discussed the implications of the next Congress being awarded to New Zealand We agreed to organise a satellite to this congress in an area of mutual interest the neuroscience of movement and sensation Australia has a long standing and enviable reputation in the field of neural mechanisms of sensorimotor control Arguably this reached its peak with the award of a Nobel Prize to Sir John Eccles in 1963 for his work on synaptic transmission in the central nervous system Since that time the subject of neuroscience has progressed considerably One advance is the exploitation of knowledge acquired from animal experiments to studies on conscious human subjects In this development Australians have achieved international prominence particularly in the areas of kinaesthesia and movement control This bias is evident in the choice of subject matter for the conference and subsequently this book It was also decided to assign a whole section to muscle mechanics a subject that is often left out altogether from conferences on motor control Cairns is a lovely city and September is a good time to visit it Motor System Disorders, Part II David S. Younger, 2023-08-22 This comprehensive review of research and best practice clinical management of spinal cord neurodegenerative and cerebral disorders is intended for both researchers and clinicians Encompassing hereditary and acquired disorders from disease and accident the book explores motor control disorders associated with stroke dementia seizure encephalitis and more Covering disorders of both children and adults the book discusses the latest advances in treatments related to neuroplasticity neural tissue transplantation and immunotherapy Summarizes assessment disease course and best practice treatment Includes hereditary disorders and disorders from disease or accident Discusses advances in neuroplasticity tissue transplantation immunotherapy and other treatments Reviews effects of dementia stroke seizure encephalitis cancer and more
