unavailable observations of this phenomenon investigations of the cause and source mechanism of seismic events studies of source location distributions determinations of seismic source parameters cases of the use of such parameters in assessing rockburst hazard in mines and measurements of velocity and attenuation properties of rock masses The present collection of papers provides an excellent indication of the current state of the art and new developments in this area of research

Enhanced Geothermal Systems (EGS) Dornadula Chandrasekharam, Alper Baba, 2023-10-02 Peter Meisen Past President Global Energy Network Institute asked in 1997 What if there was an existing viable technology that when developed to its highest potential could increase everyone's standard of living cut fossil fuel demand and the resultant pollution After 23 years of sustained effort by the global scientific community this is becoming a reality The technology to extract heat from granite has been revolutionized in the last few years The classical method of creating fracture networks by hydrofracturing is being replaced by a closed loop method where fluids are not in contact with the hot granite Supercritical CO₂ is replacing water as a circulating fluid Certainly the future energy road is going to be led by highly radiogenic granites While hydrothermal sources are site specific and have their limitations EGS can be initiated anywhere on earth EGS is removing all such obstacles and in the future will provide uninterrupted electricity for all Energy deficient countries can have surplus electricity water stressed countries can have a perennial freshwater supply and countries can become food secure and rise above poverty levels Countries need not depend on energy imports and can independently evolve into carbon neutral or low carbon societies The contributions made by experts will help researchers and investors to close the energy demand and supply gap in the very near future by tapping the unlimited energy of the Earth Opportunities available for investors in Turkey are well documented with field geophysical and geochemical data and information on the energy generating capacity of the granite intrusive spread over a cumulative area of 6 910 km² in western Anatolia With the signing of the Global Geothermal Alliance GGA by several countries during the December 2015 CoP 21 Conference of Parties summit in Paris countries are obliged to reduce CO₂ emissions by increasing the footprint of renewable energy in the primary source mix Information provided in this book will lead the way to establishing a clean energy future for millions of people for sustainable development and help to mitigate crises arising due to food water and energy shortage issues Academic and research institutes will benefit to a large extent from the expertise of the top contributors in this book This information provided in this book will help to lay the foundation for super hot EGS research in future **Geologica Belgica**, 2000
