The Pathophysiologic Basis of Nuclear Medicine Abdelhamid H. Elgazzar, 2022-07-09 This book now in its fourth edition aims to promote a deeper understanding of the scientific and clinical basis of nuclear medicine and the new directions in medical imaging The new edition has been revised and updated significantly to reflect recent changes and to ensure that the contents

are in line with likely future directions In addition to that chapters have been reorganized in order to simplify the contents and to increase the readability The book starts by providing essential information on general pathophysiology cell biology and biologic effects of ionizing radiation followed by the mechanisms of radiopharmaceutical localization in different tissues and cells This is followed by a series of chapters that covers all relevant organ systems presenting the basic knowledge of anatomy physiology and pathology and relating them to the clinical utilization of various scintigraphic modalities The final chapter is devoted to the basis of therapeutic applications of nuclear medicine The book will prove invaluable to all with an interest in the pathophysiologic basis of Nuclear Medicine including nuclear medicine professionals radiologists surgeons pediatricians and internal medicine physicians

Advances in Abdominal Surgery E. Zanella, 2012-12-06 General surgery consists of a main corpus of propaedeutic elements and clinical problems which has been modified over the years by the separate development of numerous sub-specialistic branches Although a common basis on the physiopathology of surgical trauma and post-operative complications persists as a result of general knowledge of surgical diseases there is no doubt that in the spheres of doctrine and application both research and clinical medicine have distinguished themselves autonomously in many surgical fields orthopedics neurosurgery cardiovascular surgery thoracic surgery urology etc It is therefore difficult to define the present configuration of general surgery but without question abdominal surgery occupies a position of pre-eminent importance within the general framework We are dealing in fact with pathological pictures which occur in a section of the body of vast proportions in which structures organs and morphologically complex spaces are arranged to carry out important functions They are therefore subject to considerably complex pathological alterations such as to establish an interesting field of diagnostic discussion and an exciting training ground for surgical activity It can be affirmed that the diagnosis and cures of abdominal surgical diseases constitute a test of the surgeon's experience Diagnosis is often entrusted to a differential process the results of which may be confirmed today by complementary diagnostics This however must be guided by predominating clinical considerations the exaggerated use of diagnostic techniques detached from clinical examination being the cause of very serious errors which can mislead decision making and human contact which is the basis of correct medical practice
