Looking In Seeing Out Consciousness And Cosmos:

Looking In, Seeing Out Minas C. Kafatos, 1991-10-01 Most books on science and mysticism attempt to link modern physics to philosophic views of consciousness This book explores the two as parallel processes one outer one inner Our outward search is for objective reality out there in the world But what we experience as outer is linked to what we can know in ourselves subjectively The inward search is for that level of consciousness that underlies all subjective experience spoken of by the mystics Like other recent others Drs Kafatos and Karatou find parallels between Eastern thought and recent scientific developments in quantum theory and cosmology But they go farther and hold that the realms of consciousness and the objective world are complementary aspect of the same reality Their approach is fresh and unique and shows how we are involved in the cosmic process

The Nature of Time: Geometry, Physics and Perception R. Buccheri, Metod Saniga, William Mark Stuckey, 2012-12-06 There are very few concepts that fascinate equally a theoretical physicist studying black holes and a patient undergoing serious mental psychosis Time undoubtedly can well be ranked among them For the measure of time inside a black hole is no less bizarre than the perception of time by a schizophrenic who may perceive it as completely suspended standing still or even reversing its direction The nature of time is certainly shrouded in profound mystery This perhaps since the concept entails multifarious and occasionally incongruous facets No wonder the subject attracts the serious attention of scholars on the one hand and of the lay public on the other Our Advanced Research Workshop is an excellent illustration of this point as the reader will soon discover It turned out to be a unique professional forum for an unusually lively effective and fruitful exchange of ideas and beliefs among 48 participants from 20 countries worldwide selected out of more than a hundred applicants The present book is based on the select talks presented at the meeting and aims to provide the interested layperson and specialist alike with a multidisciplinary sampling of the most up to date scholarly research on the nature of time It represents a coherent state of the art volume showing that research relevant to this topic is necessarily interdisciplinary and does not ignore such delicate issues as altered states of consciousness religion and metaphysics

Astronomy and Civilization in the New Enlightenment Anna-Teresa Tymieniecka, Attila Grandpierre, 2010-11-18 This volume represents the first which interfaces with astronomy as the fulcrum of the sciences It gives full expression to the human passion for the skies Advancing human civilization has unfolded and matured this passion into the comprehensive science of astronomy Advancing science's quest for the first principles of existence meets the ontopoietic generative logos of life the focal point of the New Enlightenment It presents numerous perspectives illustrating how the interplay between human beings and the celestial realm has informed civilizational trends Scholars and philosophers debate in physics and biology the findings of which are opening a more inclusive wider picture of the universe The different models of the universal order and of life here presented all aiming at the first principles of existence accord with the phenomenology ontopoiesis of life within the logos prompted primogenital stream of becoming and action which points to a
