Lymphatic Continuum Revisited, Volume 1131 Stanley G. Rockson, 2008-06-23 Lymphatic research has experienced a near explosion of activity in recent years as awareness of the importance of lymphatic mechanisms to the continuum of human biology and disease has grown This lymphatic continuum now easily encompasses cardiovascular disease respiratory inflammation obesity autoimmune disease and chronic transplant rejection among many other pathologic conditions An

exponential growth in technological tools for research has made possible a similar growth in our comprehension of the molecular regulatory processes that govern the normal development and function of the lymphatic system. The purpose of this volume is to review and document the wonderful growth of insight into the tools for lymphatic investigation, biological principles of the lymphatic system and biological principles in lymphedema diagnosis and management as well as the lymphatic biology of cancer and metastasis. Green Trends in Insect Control Oscar López, José G. Fernández-Bolaños, 2011. This book presents the current approaches for insect pest control as a green alternative to classical and more toxic agrochemicals. An overview of the recent advances in insecticide chemistry is also included, which will be of interest to a vast group of researchers: agrochemists, biochemists, chemists and toxicologists. The combination of both chemical and toxicological aspects of insecticides is unique, and the book includes contributions from synthetic chemists, entomologists, environmentalists and toxicologists, giving it wide appeal. Throughout the book, the different approaches that involve greener chemicals are emphasized. The book is divided into 9 chapters, each considering the state of art of each family of insecticides together with future expectations. Each chapter gives a description of useful biorational insecticides, highlighting environmentally friendly processes, and then the mode of action is fully described, emphasizing selectivity towards targeted species. Finally, for every family of compounds, their environmental effects, toxicity, bioaccumulation and metabolism are considered, comparing them to classical insecticides, including human and environmental risk assessments. In addition, the formulation, dispersal and persistence in the environment are covered as key aspects in developing greener agrochemicals. The book also includes a general introduction to entomology with special emphasis on those insects that act as vectors in the spread of diseases. Insects that may be potential pests against humans and livestock are included, focusing on their life cycles and physiology as a logical comprehension of mode of action of insecticides. In addition, there is a chapter on classical insecticides covering both approaches prior to the chemical era and classical chemical insecticides: organochlorinated, organophosphorus and carbamates, for comparison with current trends in pest control. The negative environmental effects that such insecticides have caused in nature, such as poisonings, bioaccumulation or toxic effects, are highlighted. It is hoped that the use of more specific

agrochemicals and approaches may avoid or at least considerably reduce such severe and irreversible effects in nature The insecticides covered are considered from numerous points of views chemistry toxicological profile risk assessment legal status environmental behaviour and selectivity The most important families of currently used insecticides are covered and critical discussions about future perspectives are included with frequent comparisons to classical insecticides The following topics are covered in the book as greener alternatives to classical insecticides Pyrethrins and pyrethroids Neonicotinoids Spynosins Insect growth regulators Botanical insecticides Microbial insecticides Integrated Pest Management Programs IPM
