fivefold symmetry and the areas that are being bridged by this unique concept      *Mathematics and Art* Lynn Gamwell, 2016

This is a cultural history of mathematics and art from antiquity to the present. Mathematicians and artists have long been on a quest to understand the physical world they see before them and the abstract objects they know by thought alone. Taking readers on a tour of the practice of mathematics and the philosophical ideas that drive the discipline, Lynn Gamwell points out the important ways mathematical concepts have been expressed by artists. Sumptuous illustrations of artworks and cogent math diagrams are featured in Gamwell's comprehensive exploration. Gamwell begins by describing mathematics from antiquity to the Enlightenment, including Greek, Islamic, and Asian mathematics. Then focusing on modern culture, Gamwell traces mathematicians' search for the foundations of their science, such as David Hilbert's conception of mathematics as an arrangement of meaning-free signs, as well as artists' search for the essence of their craft, such as Aleksandr Rodchenko's monochrome paintings. She shows that self-reflection is inherent to the practice of both modern mathematics and art and that this introspection points to a deep resonance between the two fields. Kurt Gödel posed questions about the nature of mathematics in the language of mathematics, and Jasper Johns asked, "What is art in the vocabulary of art?" Throughout, Gamwell describes the personalities and cultural environments of a multitude of mathematicians and artists, from Gottlob Frege and Benoît Mandelbrot to Max Bill and Xu Bing. *Mathematics and Art* demonstrates how mathematical ideas are embodied in the visual arts and will enlighten all who are interested in the complex intellectual pursuits, personalities, and cultural settings that connect these vast disciplines.

**The Coxeter Legacy** Harold Scott Macdonald Coxeter, Chandler Davis, Erich W. Ellers, This collection of essays on the legacy of mathematician Donald Coxeter is a mixture of surveys, updates, history, storytelling, and personal memories covering both applied and abstract maths. Subjects include polytopes, Coxeter groups, equivelar polyhedra, Ceva's theorem, and Coxeter and the artists.

**Emblematic Tendencies in the Art and Literature of the Twentieth Century** Anthony John Harper, Ingrid Höpel, Susan Sirc, 2005

**Mathematics, Art, Technology and Cinema** MIRELLA MANARESI, 2003-07-21 This book is about mathematics. But also about art, technology, and images. And above all about cinema, which in the past years together with theater has discovered mathematics and mathematicians. It was conceived as a contribution to the World Year on Mathematics. The authors argue that the discussion about the differences between the so-called two cultures of science and humanism is a thing of the past. They hold that both cultures are truly linked through ideas and creativity, not only through technology. In doing so, they succeed in reaching out to non-mathematicians and those who are not particularly fond of mathematics. An insightful book for mathematicians, film lovers, those who feel passionate about images, and those with a questioning mind.
