Mass Transfer And Kinetics Of Ion Exchange:

Mass Transfer and Kinetics of Ion Exchange L. Liberti, F.G. Helfferich, 2012-12-06 While ion exchange processes were originally used for the treatment of very dilute solutions many applications for the treatment of concentrated solutions have been developed in recent years In these situations the mass transfer bottlenecks are located in the solid rather than the liquid phase Therefore the development of quantitative models for ion exchange kinetics requires knowledge about the conductance characteristics of ions and solvent in the solid phase A useful approach towards this aim is the study of transport characteristics of these species and of their interactions in solid ion exchange membranes Many different transport processes and related phenomena can be observed in membrane solution systems e.g. ion migration, electroosmosis, diffusion, self-diffusion, osmosis, hydraulic flow, hyperfiltration, reverse osmosis or ultrafiltration, streaming potential and streaming current and membrane potentials also called membrane concentration potentials It is important to correlate all these phenomena so as to avoid a very large number of unnecessary measurements Such correlation is often possible Meares 1976 since all these phenomena are determined by the ease of migration of the different species across the membrane Important correlations have been made and summarized even before high capacity ion exchange membranes became commercially available Sollner 1950 1971

Fundamentals of Water Treatment Unit Processes David Hendricks, 2010-11-09 Carefully designed to balance coverage of theoretical and practical principles Fundamentals of Water Treatment Unit Processes delineates the principles that support practice using the unit processes approach as the organizing concept The author covers principles common to any kind of water treatment for example drinking water, municipal wastewater, industrial water treatment, industrial waste water treatment and hazardous wastes Since technologies change but principles remain constant the book identifies strands of theory rather than discusses the latest technologies giving students a clear understanding of basic principles they can take forward in their studies Reviewing the historical development of the field and highlighting key concepts for each unit process each chapter follows a general format that consists of process description, history, theory, practice, problems, references and a glossary This organizational style facilitates finding sections of immediate interest without having to page through an excessive amount of material Pedagogical Features End of chapter glossaries provide a ready reference and add terms pertinent to topic but beyond the scope of the chapter Sidebars sprinkled throughout the chapters present the lore and history of a topic enlarging students perspective Example problems emphasize tradeoffs and scenarios rather than single answers and involve spreadsheets Reference material includes several appendices and a quick reference spreadsheet Solutions manual includes spreadsheets for problems Supporting material is available for download Understanding how the field arrived at its present state of the art places the technology in a more logical context and gives students a strong foundation in basic principles This book does more than build technical proficiency it adds insight and understanding to the broader aspects of water treatment unit processes

Process Scale Purification of Antibodies Uwe

Gottschalk,2011-09-20 Traditional column chromatography dominates current purification technology and many of the productivity gains that have been achieved have relied on upscaling such devices However this comes with a cost penalty and the pharmaceutical industry has reached the point at which further upscaling becomes economically unsupportable This book offers a broad based reassessment of old and new purification methods incorporating an analysis of innovative new trends in purification The book has wide coverage of different antibody purification strategies and brings together top tier experts to address problems in process scale antibody purification

Advances in Soil Science ,2012-12-06 The world needs for food and fiber continue to increase Population growth in the developing countries peaked at 2.4 percent a year in 1965 and has fallen to about 1.1 percent However in many developing countries almost half the people are under 15 years of age poised to enter their productive and reproductive years The challenges to produce enough food for this growing population will remain great Even more challenging is growing the food in the areas of greatest need Presently the world has great surpluses of food and fiber in some areas while there are devastating deficiencies in other areas Economic conditions and the lack of suitable infrastructure for distribution all too often limit the alleviation of hunger even when there are adequate supplies sometimes even within the country itself World hunger can only be solved in the long run by increasing crop production in the areas where the population is growing most rapidly This will require increased efforts of both the developed and developing countries Much of the technology that is so successful for crop production in the developed countries cannot be utilized directly in the developing countries Many of the principles however can and must be adapted to the conditions both physical and economic of the developing countries This series *Advances in Soil Science* **Ion Exchange Technology** Arup

K. SenGupta,1995-06-15 This book provides comprehensive coverage of developments in ion exchange areas which would continue to have major impacts in the general pursuit of pollution control and pollution prevention Its nine chapters can be split into four different theme areas trace contaminants removals new materials desalination and finally controlling gaseous pollutants This would have value for practicing engineers scientists and researchers who are pertaining to ion exchange technology It would also serve the needs of those trying to explore and identify new technologies in the areas of pollution control and pollution prevention
