Machine Translation A View From The Lexicon Artificial Intelligence:

Machine Translation Bonnie Jean Dorr, 1993 This book describes a novel cross linguistic approach to machine translation that solves certain classes of syntactic and lexical divergences by means of a lexical conceptual structure that can be composed and decomposed in language specific ways This approach allows the translator to operate uniformly across many languages while still accounting for knowledge that is specific to each language *Machine Translation: From Research to Real Users* Stephen D. Richardson, 2003-06-30 AMTA 2002 From Research to Real Users Ever since the showdown between Empiricists and Rationalists a decade ago at TMI 92 MT researchers have hotly pursued promising paradigms for MT including data driven approaches e g statistical example based and hybrids that integrate these with more traditional rule based components During the same period commercial MT systems with standard transfer architectures have evolved along a parallel and almost unrelated track increasing their coverage primarily through manual update of their lexicons we assume and achieving much broader acceptance and usage principally through the medium of the Internet Webpage translators have become commonplace a number of online translation services have appeared including in their offerings both raw and postedited MT and large corporations have been turning increasingly to MT to address the exigencies of global communication Still the output of the transfer based systems employed in this expansion represents but a small drop in the ever growing translation marketplace bucket **Artificial Intelligence** R. B. Mishra, 2010-10 This book has been written keeping in view the requirements of undergraduate and postgraduate students and research scholars in the area of computer science and engineering in particular and other branches of engineering which deal with the study of AI such as electronics engineering electrical engineering industrial engineering robotics and FMS Besides the engineering students the postgraduate students of computer science and computer applications and cognitive sciences researchers can equally benefit from this text The basic concepts of artificial intelligence together with knowledge representation reasoning methods acquisition management and distributed architecture have been nicely and instructively described The various application domains and disciplines in engineering management medicine which cover different aspects of design assembly and monitoring have been presented with utility aspects of AI concepts in logic and knowledge The book maintains a simple and comprehensible style of presentation for the different categories of readers such as students researchers and professionals for their respective uses *Intelligent Language Tutors* V. Melissa Holland, Jonathan D. Kaplan, Michelle R. Sams, 2014-01-09 The techniques of natural language processing NLP have been widely applied in machine translation and automated message understanding but have only recently been utilized in second language teaching This book offers both an argument for and a critical examination of this new application with an examination of how systems may be designed to exploit the power of NLP accommodate its limitations and minimize its risks This volume marks the first collection of work in the U S and Canada that incorporates advanced human language technologies into language tutoring systems covering languages as diverse as Arabic

Spanish Japanese and English The book is organized into sections that express the levels of analysis dealt with in learning and teaching a language and with the tasks of the student as writer reader conversant and actor in the world These sections bring together research by specialists in linguistics artificial intelligence psychology instructional design and language teaching In addition to providing detailed descriptions of working systems amply illustrated with screens from lesson and authoring interfaces the contributors address a spectrum of common issues What can current NLP technology contribute to computer assisted language instruction and to research on language learning How can this technology meet the demands of pedagogical theory for communicative language teaching in authentic contexts How can designers constrain tutoring environments to ensure accurate analysis of learners language What can NLP based systems teach us about language acquisition about linguistic theory and about theories of language pedagogy What lessons have been learned in using these systems to date Discipline specific issues are illuminated as well the relative merits of the major syntactic frameworks for NLP based language tutoring the adaptation of theories like lexical conceptual structure to support semantic interpretation the integration of input language with visual microworlds and dialogue games the pragmatics of the tutoring discourse the selection of instructional principles to guide system design and the accomodation of design to individual differences and learner styles A concluding section assesses this work from larger theoretical and practical perspectives experimental psychology and psycholinguistics linguistics language teaching and second language acquisition research

Advances in Computers ,1999-09-14 Since its first volume in 1960 *Advances in Computers* has presented detailed coverage of innovations in hardware and software and in computer theory design and applications It has also provided contributors with a medium in which they can examine their subjects in greater depth and breadth than that allowed by standard journal articles As a result many articles have become standard references that continue to be of significant lasting value despite the rapid growth taking place in the field

PRICAI 2010: Trends in Artificial Intelligence Byoung-Tak Zhang,2010

Machine Translation: From Real Users to Research Robert E. Frederking,Kathryn B. Taylor,2004-09-21 The previous conference in this series AMTA 2002 took up the theme From Research to Real Users and sought to explore why recent research on data driven machine translation didn't seem to be moving to the marketplace As it turned out the first commercial products of the data driven research movement were just over the horizon and in the intervening two years they have begun to appear in the marketplace At the same time rule based machine translation systems are introducing data driven techniques into the mix in their products Machine translation as a software application has a 50 year history There are an increasing number of exciting deployments of MT many of which will be exhibited and discussed at the conference But the scale of commercial use has never approached the estimates of the latent demand In light of this we reversed the question from AMTA 2002 to look at the next step in the path to commercial success for MT We took user needs as our theme and explored how or whether market requirements are feeding into research programs The transition of research discoveries to practical use involves te

nical questions that are not as sexy as those that have driven the research community and research funding. Important product issues such as system customizability, computing resource requirements, and usability and fitness for particular tasks need to engage the creative energies of all parts of our community, especially research, as we move machine translation from a niche application to a more pervasive language conversion process. These topics were addressed at the conference through the papers contained in these proceedings and even more specifically through several invited presentations and panels.

Machine Translation and the Information Soup David Farwell, Laurie Gerber, Eduard Hovy, 2003-06-29

Machine translation has grown from a tantalizing dream to a respectable and stable scientific linguistic enterprise with users, commercial systems, university research, and government participation. But until very recently, MT has been performed as a relatively distinct operation, so what isolated from other text processing. Today this situation is changing rapidly. The explosive growth of the Web has brought multilingual text into the reach of nearly everyone with a computer. We live in a soup of information, an increasingly multilingual bouillabaisse. And to partake of this soup, we can use MT systems together with more and more tools and language processing technologies, information retrieval engines, automated text summarizers, and multimodal and multilingual displays. Though some of them may still be rather experimental and though they may not quite fit together well yet, it is clear that the future will offer text manipulation systems that contain all these functions seamlessly interconnected in various ways.

Assistive Technology and Artificial Intelligence Vibhu O. Mittal, 1998-07-15

This book constitutes a carefully arranged selection of revised papers on assistive technology first presented at related AAAI workshops between 1995 and 1998. The book is devoted to the advancement and use of AI-stimulated technology that can help users extend their current range of cognitive and sensory abilities or overcome their motor disabilities. Among various issues in the interdisciplinary area of assistive technology, the papers address topics from natural language processing, planning, robotics, user interface design, computer vision, and learning.

The Human Factor in Machine Translation Sin-wai Chan, 2018-05-08

Machine translation has become increasingly popular, especially with the introduction of neural machine translation in major online translation systems. However, despite the rapid advances in machine translation, the role of a human translator remains crucial. As illustrated by the chapters in this book, human-machine interaction is essential in machine translation, localisation, terminology management, and crowdsourcing translation. In fact, the importance of a human translator before, during, and after machine processing cannot be overemphasised, as human intervention is the best way to ensure the translation quality of machine translation. This volume explores the role of a human translator in machine translation from various perspectives, affording a comprehensive look at this topical research area. This book is essential reading for anyone involved in translation studies, machine translation, or interested in translation technology.

Incremental Speech Translation Jan W. Amtrup, 2003-06-26

Human language capabilities are based on mental

procedures that are closely linked to the time domain. Listening, understanding and reacting on the one hand as well as planning, formulating and speaking on the other are performed in a highly overlapping manner thus allowing inter human communication to proceed in a smooth and fluent way. Although it happens to be the natural mode of human language interaction, incremental processing is still far from becoming a common feature of today's language technology. Instead it will certainly remain one of the big challenges for research activities in the years to come. Usually considered difficult to a degree that renders it almost intractable for practical purposes, incremental language processing has recently been attracting a steadily growing interest in the spoken language processing community. Its notorious difficulty can be attributed mainly to two reasons. Due to the inaccessibility of the right context, global optimization criteria are no longer available. This loss must be compensated for by communicating larger search spaces between system components or by introducing appropriate repair mechanisms. In any case the complexity of the task can easily grow by an order of magnitude or even more. Incrementality is an almost useless feature as long as it remains a local property of individual system components. The advantages of incremental processing can be effective only if all the components of a producer-consumer chain consistently adhere to the same pattern of temporal behavior.

Computational Linguistics and Intelligent Text Processing

Alexander Gelbukh, 2005-01-31. This book constitutes the refereed proceedings of the 6th International Conference on Computational Linguistics and Intelligent Text Processing (CICLing 2005) held in Mexico City, Mexico, in February 2005. The papers are organized in topical sections on computational linguistics, forum, semantics and discourse, parsing and syntactic disambiguation, morphology, anaphora and coreference, word sense disambiguation, lexical resources, natural language generation, machine translation, speech and natural language interfaces, language documentation, information extraction, information retrieval, question answering, summarization, text classification, categorization and clustering, named entity recognition, language identification and spelling and style checking.

Machine Translation and the Lexicon Petra Steffens, 1995-03-06. This volume constitutes the proceedings of the Third International Workshop of the European Association for Machine Translation held in Heidelberg, Germany, in April 1993. The EAMT Workshops traditionally aim at bringing together researchers, developers, users and others interested in the field of machine or computer assisted translation research, development and use. The volume presents thoroughly revised versions of the 15 best workshop contributions together with an introductory survey by the volume editor. The presentations are centered primarily on questions of acquiring, sharing and managing lexical data but also address aspects of lexical description.
