*Fuzzy Systems and Data Mining IX* Antonio J. Tallón-Ballesteros, Raquel Beltrán-Barba, 2023-12-15 Fuzzy systems and data mining are indispensable aspects of the digital technology on which we now all depend. Fuzzy logic is intrinsic to applications in the electrical, chemical, and engineering industries and also in the fields of management and environmental issues. Data mining is indispensable in dealing with big data, massive data, and scalable parallel and distributed algorithms. This book presents the proceedings of FSDM 2023, the 9th International Conference on Fuzzy Systems and Data Mining, held from 10-13 November 2023 as a hybrid event with some participants attending in Chongqing, China, and others online. The conference focuses on four main areas: fuzzy theory, algorithms and systems, fuzzy application, data mining, and the interdisciplinary field of fuzzy logic and data mining, and provides a forum for experts, researchers, academics, and representatives from industry to share the latest advances in the field of fuzzy sets and data mining. This year's topics from two special sessions on granular ball computing and the application of generative AI, as well as machine learning and neural networks, were also covered. A total of 363 submissions were received, and after careful review by the members of the international program committee, 110 papers were accepted for presentation at the conference and publication here, representing an acceptance rate of just over 30%. Covering a comprehensive range of current research and developments in fuzzy logic and data mining, the book will be of interest to all those working in the field of data science.

*Graphics Recognition: Algorithms and Applications* Dorothea Blostein, Young-Bin Kwon, 2003-06-30 This book presents refereed and revised papers presented at GREC 2001, the 4th IAPR International Workshop on Graphics Recognition, which took place in Kingston, Ontario, Canada, in September 2001. Graphics recognition is a branch of document image analysis that focuses on the recognition of two-dimensional notations such as engineering drawings, maps, mathematical notation, music notation, tables, and chemical structure diagrams. Due to the growing demand for both off-line and on-line document recognition systems, the field of graphics recognition has an exciting and promising future. The GREC workshops provide an opportunity for researchers at all levels of experience to share insights into graphics recognition methods. The workshops enjoy strong participation from researchers in both industry and academia. They are sponsored by IAPR TC 10, the Technical Committee on Graphics Recognition, within the International Association for Pattern Recognition. Edited volumes from the previous three workshops in this series are available as Lecture Notes in Computer Science Vols 1072, 1389, and 1941. After the GREC 2001 workshop, authors were invited to submit enhanced versions of their papers for review. Every paper was evaluated by three reviewers. We are grateful to both authors and reviewers for their careful work during this review process. Many of the papers that appear in this volume were thoroughly revised and improved in response to reviewers' suggestions.

*Advances in Artificial Intelligence* Ahmed Y. Tawfik, Scott D. Goodwin, 2004-04-16 This book constitutes the refereed proceedings of the 17th Conference of the Canadian Society for Computational Studies of Intelligence (Canadian AI 2004), held in London, Ontario, Canada, in May 2004. The 29 revised full papers and 22 revised short papers were carefully reviewed and

selected from 105 submissions These papers are presented together with the extended abstracts of 14 contributions to the graduate students track The full papers are organized in topical sections on agents natural language processing learning constraint satisfaction and search knowledge representation and reasoning uncertainty and neural networks *Handbook Of Machine Learning - Volume 1: Foundation Of Artificial Intelligence* Tshilidzi Marwala, 2018-10-22 This is a comprehensive book on the theories of artificial intelligence with an emphasis on their applications It combines fuzzy logic and neural networks as well as hidden Markov models and genetic algorithm describes advancements and applications of these machine learning techniques and describes the problem of causality This book should serve as a useful reference for practitioners in artificial intelligence
