Machine Learning and Statistical Modeling Approaches to Image Retrieval Yixin Chen,Jia Li,James Z. Wang,2004-05-27 In the early 1990s the establishment of the Internet brought forth a revolutionary viewpoint of information storage distribution and processing the World Wide Web is becoming an enormous and expanding distributed digital library Along with the development of the Web image indexing and retrieval have grown into research areas sharing a vision of intelligent agents Far beyond Web searching image indexing and retrieval can potentially be applied to many other areas including biomedicine space science biometric identification digital libraries the military education commerce culture and entertainment Machine Learning and Statistical Modeling Approaches to Image Retrieval describes several approaches of integrating machine learning and statistical modeling into an image retrieval and indexing system that demonstrates promising results The topics of this book reflect authors experiences of machine learning and statistical modeling based image indexing and retrieval This book contains detailed references for further reading and research in this field as well   Fundamentals and Methods of Machine and Deep Learning Pradeep Singh,2022-02-01 FUNDAMENTALS AND METHODS OF MACHINE AND DEEP LEARNING The book provides a practical approach by explaining the concepts of machine learning and deep learning algorithms evaluation of methodology advances and algorithm demonstrations with applications Over the past two decades the field of machine learning and its subfield deep learning have played a main role in software applications development Also in recent research studies they are regarded as one of the disruptive technologies that will transform our future life business and the global economy The recent explosion of digital data in a wide variety of domains including science engineering Internet of Things biomedical healthcare and many business sectors has declared the era of big data which cannot be analysed by classical statistics but by the more modern robust machine learning and deep learning techniques Since machine learning learns from data rather than by programming hard coded decision rules an attempt is being made to use machine learning to make computers that are able to solve problems like human experts in the field The goal of this book is to present a practical approach by explaining the concepts of machine learning and deep learning algorithms with applications Supervised machine learning algorithms ensemble machine learning algorithms feature selection deep learning techniques and their applications are discussed Also included in the eighteen chapters is unique information which provides a clear understanding of concepts by using algorithms and case studies illustrated with applications of machine learning and deep learning in different domains including disease prediction software defect prediction online television analysis medical image processing etc Each of the chapters briefly described below provides both a chosen approach and its implementation Audience Researchers and engineers in artificial intelligence computer scientists as well as software developers

Hypergraph Computation Qionghai Dai,Yue Gao,2023-06-16 This open access book discusses the theory and methods of hypergraph computation Many underlying relationships among data can be represented using graphs for example in the areas including computer vision molecular chemistry molecular biology etc In the last decade methods like graph based learning and neural network methods have been developed to process such data they are particularly suitable for handling relational learning tasks In many real world problems however relationships among the objects of our interest are more complex than pair wise Naively squeezing the complex relationships into pairwise ones will inevitably lead to loss of information which can be expected valuable for learning tasks Hypergraph as a generation of graph has shown superior performance on modelling complex correlations compared with graph Recent years have witnessed a great popularity of researches on hypergraph related AI methods which have been used in computer vision social media analysis etc We summarize these attempts as a new computing paradigm called hypergraph computation which is to formulate the high order correlations underneath the data using hypergraph and then conduct semantic computing on the hypergraph for different applications The content of this book consists of hypergraph computation paradigms hypergraph modelling hypergraph structure evolution hypergraph neural networks and applications of hypergraph computation in different fields We further summarize recent achievements and future directions on hypergraph computation in this book **I3CAC 2021** Mahalingam Sundhararajan ,Balaguru Karthik,2021-06-04 I3CAC provides a premier interdisciplinary platform for researchers
