World Cities, City Worlds William Solesbury, 2018-12-17 When living and working in cities we need to make sense of them in order to get by. We must delve below their surface to understand what makes them tick and how we can best engage with them. This book argues that three tropes can help us namely metaphors icons and perspectives. Metaphorically we can see the city as a community a battleground a marketplace a machine or an organism. Some cities are iconic they present us with characteristics that are more generally true of cities and city life such as Venice Mumbai New York Tokyo Paris and Los Angeles. Cities can also be viewed from different perspectives those of artists analysts rulers and citizens. This book explores these ways of understanding cities drawing on rich accounts of cities across the world and through time.

How To Think About Cities Deborah G. Martin, Joseph Pierce, 2022-11-29 Cities are raucous cacophonous and complex. Many dimensions of life play out and conflict across cities intricate landscapes be they political cultural economic or social. Urban policy makers and analysts often attempt to cut through the noise of

urban disagreement by emphasizing a dominant lens for understanding the key central logic of the city How To Think About Cities sees this tendency to selective vision as misleading and ultimately unjust cities are many things at once to different people and communities This book describes the various ways of seeing the functions and landscapes of the city as place frames and the constant process of negotiating which place frames best explain the city as place making Martin and Pierce call for an explicitly hybrid perspective that shifts between many different frames for making sense of cities This approach highlights how any given stance opens up some lines of inquiry and understanding while closing off others Thinking of cities as sites of contested perspectives promotes a synthetic approach to urban analysis that emphasizes difference and political possibility This mosaic view of the city will be a welcome read for those within urban studies geography and social sciences exploring the many faces of urban life The Routledge Companion to Smart Cities Katharine S. Willis, Alessandro

Aurigi, 2020-03-27 The Routledge Companion to Smart Cities explores the question of what it means for a city to be smart raises some of the tensions emerging in smart city developments and considers the implications for future ways of inhabiting and understanding the urban condition The volume draws together a critical and cross disciplinary overview of the emerging topic of smart cities and explores it from a range of theoretical and empirical viewpoints This timely book brings together key thinkers and projects from a wide range of fields and perspectives into one volume to provide a valuable resource that would enable the reader to take their own critical position within the topic To situate the topic of the smart city for the reader and establish key concepts the volume sets out the various interpretations and aspects of what constitutes and defines smart cities It investigates and considers the range of factors that shape the characteristics of smart cities and draws together different disciplinary perspectives The consideration of what shapes the smart city is explored through discussing three broad parts issues of governance the nature of urban development and how visions are realised and includes chapters that draw on empirical studies to frame the discussion with an understanding not just of the nature of the smart city but also how it is studied understood and reflected upon The Companion will appeal to academics and advanced undergraduates and postgraduates from across many disciplines including Urban Studies Geography Urban Planning Sociology and Architecture by providing state of the art reviews of key themes by leading scholars in the field arranged under clearly themed sections

The New Science of Cities Michael Batty, 2017-07-28 A proposal for a new way to understand cities and their design not as artifacts but as systems composed of flows and networks In The New Science of Cities Michael Batty suggests that to understand cities we must view them not simply as places in space but as systems of networks and flows To understand space he argues we must understand flows and to understand flows we must understand networks the relations between objects that compose the system of the city Drawing on the complexity sciences social physics urban economics transportation theory regional science and urban geography and building on his own previous work Batty introduces theories and methods that reveal the deep structure of how cities function Batty presents the foundations of a new science of cities

defining flows and their networks and introducing tools that can be applied to understanding different aspects of city structure He examines the size of cities their internal order the transport routes that define them and the locations that fix these networks He introduces methods of simulation that range from simple stochastic models to bottom up evolutionary models to aggregate land use transportation models Then using largely the same tools he presents design and decision making models that predict interactions and flows in future cities These networks emphasize a notion with relevance for future research and planning that design of cities is collective action
