Career Development and Systems Theory Wendy Patton, Mary

McMahon, 2006 The Systems Theory Framework was developed to produce a metatheoretical framework through which the contribution of all theories to our understanding of career behaviour could be recognised In addition it emphasises the individual as the site for the integration of theory and practice Its utility has become more broadly acknowledged through its application to a range of cultural groups and settings qualitative assessment processes career counselling and multicultural career counselling For these reasons the STF is a very valuable addition to the field of career theory In viewing the field of career theory as a system open to changes and developments from within itself and through constantly interrelating with other systems the STF and this book are adding to the pattern of knowledge and relationships within the career field The contents of this book will be integrated within the field as representative of a shift in understanding existing relationships within and between theories In the same way each reader will integrate the contents of the book within their existing views about the current state of career theory and within their current theory practice relationship Back cover ed The Corsini Encyclopedia of Psychology, Volume 4 Irving B. Weiner, W. Edward Craighead, 2010-01-19 Psychologists researchers teachers and students need complete and comprehensive information in the fields of psychology and behavioral science The Corsini Encyclopedia of Psychology Volume Four has been the reference of choice for almost three decades This indispensable resource is updated and expanded to include much new material It uniquely and effectively blends psychology and behavioral science The Fourth Edition features over 1 200 entries complete coverage of DSM disorders and a bibliography of over 10 000 citations Readers will benefit from up to date and authoritative coverage of every major area of psychology

Academic Disciplines John C. Smart, Kenneth A. Feldman, Corinna A. Ethington, 2000 Using as a framework the theory of careers developed by John L Holland the authors of this volume examine the patterns of student stability and change inherent in the college experience as well as the variations in professional attitudes and behaviors of college faculty Their goal is to learn more about what colleges and universities might do to facilitate the retention satisfaction and learning of their students For example why should faculties split over student oriented teaching strategies one group favoring the formal structured classroom the other a freer more spontaneous environment Why do some undergraduates become independent thinkers with strong analytical mathematical and scientific competencies while others develop powerful interpersonal and group leadership skills Holland s theory at its core a person environment fit theory assumes that there are six personality

types and six analogous academic environments and that the educational persistence satisfaction and achievement of students are a function of the congruence or fit between students and their academic environments The authors also assume that there are circumstances under which the environments of the major field exert more influence on students than do the students own personality traits Applying Holland s theory to distinctive clusters of academic disciplines the authors have found that the answers to such fundamental questions as those asked above emanate from a basic understanding of the influences of academic disciplines and the manner by which they shape the patterns of thought and behavior of both college students and faculty Academic Disciplines will benefit researchers and graduate students who study college students and faculty as well as administrators and policymakers responsible for the performance of colleges and universities The Role of Values in Careers Mark Pope,Lisa Y.
