**Making Sense of Secondary Science** Rosalind Driver, Peter Rushworth, Ann Squires, Valerie Wood-Robinson, 2005-11-02

When children begin secondary school they already have knowledge and ideas about many aspects of the natural world from their experiences both in primary classes and outside school. These ideas, right or wrong, form the basis of all they subsequently learn. Research has shown that teaching is unlikely to be effective unless it takes into account the position from which the learner starts. *Making Sense of Secondary Science* provides a concise and accessible summary of the research that has been done internationally in this area. The research findings are arranged in three main sections: life and living processes, materials and their properties, and physical processes. Full bibliographies in each section allow interested readers to pursue the themes further. Much of this material has hitherto been available only in limited circulation specialist journals or in unpublished research. Its publication in this convenient form will be welcomed by all researchers in science education and by practicing science teachers continuing their professional development who want to deepen their understanding of how their children think and learn.

*Making Sense of Secondary Science* Rosalind Driver, Ann Squires, Peter Rushworth, Valerie Wood-Robinson, 2014-09-19

What ideas do children hold about the natural world? How do these ideas affect their learning of science? Young learners bring to the classroom knowledge and ideas about many aspects of the natural world constructed from their experiences of education and from outside school. These ideas contribute to subsequent learning and research has shown that teaching of science is unlikely to be effective unless it takes learners' perspectives into account. *Making Sense of Secondary Science* provides a concise, accessible summary of international research into learners' ideas about science, presenting evidence-based insight into the conceptions that learners hold before and even despite teaching. With expert summaries from across the science domains, it covers research findings from life and living processes, materials and their properties, and physical processes. This classic text is essential reading for all trainee secondary, elementary, and primary school science teachers, as well as those researching the science curriculum and science methods who want to deepen their understanding of how learners think and to use these insights to inform teaching strategies. It also provides a baseline for researchers wishing to investigate contemporary influences on children's ideas and to study the persistence of these conceptions. Both components of *Making Sense of Secondary Science*—this book and the accompanying teacher's resource file *Making Sense of Secondary Science* Support materials for teachers—were developed as a result of a collaborative project between Leeds City Council Department of Education and the Children's Learning in Science Research Group at the University of Leeds, UK.
