Yano, 2018-02-28 Musical sounds are some of the most mobile human elements crossing national cultural and regional boundaries at an ever increasing pace in the twentieth and twenty first centuries Whole musical products travel easily though not necessarily intact via musicians CDs and earlier cassettes satellite broadcasting digital downloads and streaming The introductory chapter by the volume editors develops two framing metaphors traveling musics and making waves The wave making metaphor illuminates the ways that traveling musics traverse flows of globalization and migration initiating change and generating energy of their own Each of the nine contributors further examines music its songs makers instruments aurality aesthetics and images as it crosses oceans continents and islands In the process of landing in new homes music interacts with older established cultural environments sometimes in unexpected ways and with surprising results They see these traveling musics in Hawai i Asia and the Pacific as making waves that is not only riding flows of globalism but instigating ripples of change What is the nature of those ripples What constitutes some of the infrastructure for the wave itself What are some of the effects of music landing on transported to or appropriated from distant shores How does the Hawai i Asia Pacific context itself shape and get shaped by these musical waves The two poetic and evocative metaphors allow the individual contributors great leeway in charting their own course while simultaneously referring back to the influence of their mentor and colleague Ricardo D Trimillos whom they identify as the wave maker The volume attempts to position music as at once ritual and entertainment esoteric and exoteric tradition and creativity within the cultural geographies of Hawai i Asia and the Pacific In doing so they situate music at the very core of global human endeavors

Trigonometry has 2000 year old roots in everyday useful endeavors like finding the size of an object too big or far away to measure directly or navigating from Point A to Point B However it is often taught very theoretically with an emphasis on abstractions Make Trigonometry uses 3D printable models and readily available physical objects like wire and cardboard tubes to develop intuition about concepts in trigonometry and basic analytic geometry Readers will imagine the thought process of the people who invented these mathematical concepts and can try out math experiments to see for themselves how ingenious ancient navigators and surveyors really were The analytic geometry part of the book links equations to many of these intuitive concepts which we explore through in depth explanations of manipulative models of conic sections This book is aimed at high school students who might be in Algebra II or Pre Calculus It shows the geometrical and practical sides of these topics that otherwise can drown in their own algebra Make Trigonometry builds on the basics of the authors earlier book Make Geometry and is intended as a bridge from that book to their Make Calculus book The user can read this book and understand the concepts from the photographs of 3D printable models alone However since many models are puzzle like we encourage the reader to print the models on any consumer grade filament based 3D printer The models are available for download in a freely available open source repository They were created in the free program OpenSCAD and can be 3D printed or modified by the student in OpenSCAD to learn a little coding along the way
