Malaria Control During Mass Population Movements and Natural Disasters Program on Forced Migration and Health at the Mailman School of Public Health of Columbia University, National Research Council, Committee on Population, Roundtable on the Demography of Forced Migration, Holly A. Williams, Peter B. Bloland, 2002-12-16 Admittedly the world and the nature of forced migration have changed a great deal over the last two decades The relevance of data accumulated during that time period can now be called into question The roundtable and the Program on Forced Migration at the Mailman School of Public Health of Columbia University have commissioned a series of epidemiological reviews on priority public health problems for forced migrants that will update the state of knowledge Malaria Control During Mass Population Movements and Natural Disasters the first in the series provides a basic overview of the state of knowledge of epidemiology of malaria and public health interventions and practices for controlling the disease in situations involving forced migration and conflict

Child Health in Complex Emergencies Program on Forced Migration and Health, Mailman School of Public Health, Columbia University, National Research Council, Committee on Population, Roundtable on the Demography of Forced Migration, Lulu Muhe, William M. Weiss, Anne Henderson Siegle, Dory Storms, Meenakshi Ramakrishnan, William J. Moss, 2005-12-08 Addressing the health needs of children in complex emergencies is critical to the success of relief efforts and requires coordinated and effective interventions However little systematic work has been undertaken to evaluate such care To address this need this monograph presents a review of the published literature in this area providing background on the burden of disease the major causes of morbidity and mortality and the evidence base for

effective interventions It also describes surveys of nongovernmental organizations NGOs and international agencies providing care to children in complex emergencies which were conducted to identify guidelines commonly used to provide such care and assesses the content and limitations of these guidelines A more in depth survey of several organizations was also conducted to assess obstacles to this kind of care On the basis of the survey findings and the review of the published literature the working group recommended that evidence based locally adapted guidelines to address the curative and preventive care of children in complex emergencies and health systems planning should be adopted by ministries of health and supported by the World Health Organization WHO and UNICEF The guidelines should target as much as possible the different levels of health care workers providing care to children to ensure appropriate effective and uniform care in a variety of situations Child Health in Complex Emergencies presents specific examples of areas for further research and guideline development This report is not intended to be an exhaustive and definitive assessment of child health in complex emergencies The topic is much too vast and complex and different individuals and institutions will have incompatible perspectives Rather we aim to provide a starting point for discussion and debate on how to improve the care of children in these settings

The Making of a Tropical Disease Randall M. Packard, 2021-07-13 A global history of malaria that traces the natural and social forces that have shaped its spread and made it deadly while limiting efforts to eliminate it Malaria sickens hundreds of millions of people and kills nearly a half a million each year Despite massive efforts to eradicate the disease it remains a major public health problem in poorer tropical regions But malaria has not always been concentrated in tropical areas How did malaria disappear from other regions and why does it persist in the tropics From Russia to Bengal to Palm Beach Randall M Packard's far ranging narrative shows how the history of malaria has been driven by the interplay of social biological economic and environmental forces The shifting alignment of these forces has largely determined the social and geographical distribution of the disease including its initial global expansion its subsequent retreat to the tropics and its current persistence Packard argues that efforts to control and eliminate malaria have often ignored this reality relying on the use of biotechnologies to fight the disease Failure to address the forces driving malaria transmission have undermined past control efforts Describing major changes in both the epidemiology of malaria and efforts to control the disease the revised edition of this acclaimed history which was chosen as the 2008 End Malaria Awards Book of the Year in its original printing examines recent efforts to eradicate malaria following massive increases in funding and political commitment discusses the development of new malaria fighting biotechnologies including long lasting insecticide treated nets rapid diagnostic tests combination artemisinin therapies and genetically modified mosquitoes explores the efficacy of newly developed vaccines and explains why eliminating malaria will also require addressing the social forces that drive the disease and building health infrastructures that can identify and treat the last cases of malaria Authoritative fascinating and eye opening this short history of malaria concludes with policy recommendations for improving control strategies and saving

lives **Planetary health approaches to understand and control vector-borne diseases** Kimberley Fornace, Jan Conn, Maria Anice Mureb, Leonardo Suveges Moreira Chaves, James Logan, 2023-12-21 Mosquitoes transmit many of the pathogens that cause zoonotic diseases from wildlife and livestock to people with devastating consequences for public health. The factors affecting the ecology and evolution of the transmission dynamics of these mosquito-borne pathogens can be revealed using multidisciplinary research approaches. This 7th volume of the ECVD series focuses on the ecological factors that determine the transmission dynamics of mosquito-borne pathogens naturally circulating between animals of different taxa and their importance for human health. The authors revise the current knowledge on the pathogens that affect wildlife, including those maintained in captivity, as well as the use of cutting-edge techniques for the identification of potential vectors of these pathogens. In addition, this volume explores the role of factors related to global change, including changes in landscape use, deforestation, and urbanization, as major drivers of the distribution of mosquito vectors and the dynamics of pathogen transmission. Finally, updated information on the approaches used to identify and control mosquito-borne diseases is presented with a particular focus on those affecting humans. In summary, this book provides an updated review of the different mosquito-borne pathogens affecting animals and their public health relevance.

Global Catastrophic Biological Risks Thomas V. Inglesby, Amesh A. Adalja, 2019-11-28 This volume focuses on Global Catastrophic Biological Risks (GCBRs), a special class of infectious disease outbreaks or pandemics in which the combined capacity of the world's private and government resources becomes severely strained. These events, of which the 1918 influenza pandemic is emblematic, cause severe disruptions in the normal functioning of the world, exact heavy tolls in terms of morbidity and mortality, and lead to major economic losses. GCBRs can be caused by any type of microorganism, and myriad contextual factors can influence their impact. Additionally, there are cascading questions that arise in connection with GCBR prediction, preparation, and response. This book gathers contributions from thought leaders who discuss the multi-faceted approaches needed in order to address this problem. From understanding the special characteristics of various microbes to financing challenges, the volume provides an essential primer on a neglected but highly relevant topic. Physicians, scientists, policymakers, public health practitioners, and anyone with an interest in the field of pandemics, emerging infectious disease, biosecurity, and global health security will find it a valuable and insightful resource.

War, Humanitarian Crises, Population Displacement, and Fertility Program on Forced Migration and Health at the Mailman School of Public Health, Columbia University, National Research Council, Committee on Population, Roundtable on the Demography of Forced Migration, Kenneth Hill, 2004-08-02 Fertility and reproductive health issues more broadly have tended to be of low priority in humanitarian crises Public attention is drawn by information concerning the magnitude of refugee flows of death tolls and of numbers of injuries Reproductive health has been regarded as a longer term issue that could safely be put on the back burner during the crisis phase of an emergency when issues of providing adequate food clean water and shelter plus treating acute infectious diseases of crowding take priority This report reviews what evidence there is concerning the effects of humanitarian crisis on fertility with a view to identifying common patterns that may exist across settings and be of value in guiding responses to future crises

Global Health Kevin McCracken, David R. Phillips, 2012 The health of human populations around the world is constantly changing and the health profiles of most nations in the early twenty first century global health landscape are unrecognizable compared with those of just a century ago This book examines and explains these health changes and considers likely future patterns and changes While the overall picture charted is one of progress and improvement certain unfortunate regressions and stubbornly persistent health inequalities are equally shown to be part of the evolving patterns of global health The chapters of the book are organized in three major parts The first part introduces

readers to the principal concepts of global health and to the idea of populations having distinctive health profiles. In particular, it explores how those profiles can be measured and how they change using the umbrella concepts and theories of epidemiological and health transition. Building on the first section, the second part focuses on the evolution of health states as well as paying particular attention to the reasons for the many subnational inequalities in global health. It also examines health challenges such as the continuing infectious disease burden and current emerging epidemics. The final part transports readers from the current health scene to future possible and probable health scenarios, acknowledging the challenges presented by global environmental change as well as issues centred around geopolitics and human security. Using clear and original explanations of complex issues, this text makes extensive use of boxed case studies and international examples with thought-provoking discussion questions posed for readers at the end of each chapter. Global Health is essential reading for students of global health, public health, and development studies.

Supporting Local Health Care in a Chronic Crisis

Program on Forced Migration and Health, Mailman School of Public Health, Columbia University, National Research Council, Committee on Population, Roundtable on the Demography of Forced Migration, 2005-11-23

Providing medical support to the local population during a chronic crisis is difficult. The crisis in the Democratic Republic of the Congo (DRC), which is characterized by high excess mortality, ongoing armed violence, mass forced displacement, interference by neighboring countries, resource exploitation, asset stripping, and the virtual absence of the state, has led to great poverty and a dearth of funds for the support of the health system. International nongovernmental organizations (NGOs) have stepped in to address the dire humanitarian situation. This study looks at four organizations that support local health care in the eastern DRC: the International Rescue Committee (IRC), Malteser Medical Emergency Relief International (Merlin), and the Association R gionale d Approvisionnement en M dicaments Essentiels (ASRAMES). The study makes a comparison of the management and financing approaches of these four organizations by collecting and comparing qualitative and quantitative data on their interaction with the remaining local health providers and the local population. Specific objectives of the study are:

- 1 To identify which management and financing approaches, including the setting of fees, are used by the four NGOs supporting healthcare in the eastern DRC.
- 2 To determine how these financing approaches affect utilization rates in the health zones supported by the four NGOs.
- 3 To assess how these utilization rates compare with donor and humanitarian standards.
- 4 To determine at what level fees must be set to allow for cost recovery or cost sharing in health facilities.
- 5 To identify the managerial problems confronting the four NGOs.

Many epidemiological and public health studies focus on the interaction between health providers and target groups. Supporting Local Health Care in a Chronic Crisis: Management and Financing Approaches in the Eastern Democratic Republic of the Congo concentrates more on how the relationship between the supporting NGOs and the local health system actually develops. In addition, a common aspect of many of the epidemiological and public health studies is the search for an optimal or at least appropriate management and financing approach.
