**Industrial Enzymes** Julio Polaina, Andrew P. MacCabe, 2007-05-16 Man's use of enzymes dates back to the earliest times of civilization Important human activities such as the production of certain types of foods and beverages and the tanning of hides and skins to produce leather for garments serendipitously took advantage of enzyme activities Important advances in our understanding of the nature of enzymes and their action were made in the late 19th and early 20th centuries seeding the explosive expansion from the 1950s and 60s onward to the present billion dollar enzyme industry Recent developments in the fields of genetic engineering and protein chemistry are bringing ever more powerful means of analysis to bear on the study of enzyme structure and function that will undoubtedly lead to the rational modification of enzymes to match specific requirements as well as the design of new enzymes with novel properties This volume reviews the most important types of industrial enzymes covering in a balanced manner three interrelated aspects of paramount importance for enzyme performance three dimensional protein structure physicochemical and catalytic properties and the range of both classical and novel applications The material covered will be of interest to undergraduate and graduate students in biochemistry biotechnology and applied microbiology in addition to researchers and industrialists      *Handbook of Proteolytic Enzymes, Volume 1* Alan J. Barrett, J. Fred Woessner, Neil D. Rawlings, 2012-12-02 Handbook of Proteolytic Enzymes Second Edition Volume 1 Aspartic and Metallo Peptidases is a compilation of numerous progressive research studies on proteolytic enzymes This edition is organized into two main sections encompassing 328 chapters This handbook is organized around a system for the classification of peptidases which is a hierarchical one built on the concepts of catalytic type clan family and peptidase

The concept of catalytic type of a peptidase depends upon the chemical nature of the groups responsible for catalysis. The recognized catalytic types are aspartic, cysteine, metallo, serine, threonine, and the unclassified enzymes, while clans and families are groups of homologous peptidases. Homology at the level of a family of peptidases is shown by statistically significant relationship in amino acid sequence to a representative member called the type example or to another member of the family that has already been shown to be related to the type example. Each chapter discusses the history, activity, specificity, structural chemistry, preparation, and biological aspects of the enzyme. This book will prove useful to enzyme chemists and researchers.

**Biopharmaceutical Drug Design and Development** Susanna Wu-Pong, 1999-04-01

New discoveries in biology are occurring at an incredible rate and with these discoveries arise nearly unimaginable opportunities in every area of human existence. Imagine the excitement surrounding the penicillin project and the subsequent rapid development of anti-infective agents that took place in the 1940s and 1950s. Fast forward to the world today and our ability to treat life-threatening infections. This is but one small piece in the present kaleidoscope of new therapeutic agents. In fact, the world of science, biology, and medicine is changing so quickly that it is difficult for scientists and medical practitioners to stay abreast of their fields and confidently anticipate that their education and training will sustain them over a three to four decade career without considerable continuing education and training. For the pharmaceutical scientist responsible for the discovery and development of therapeutic agents based on advances in biotechnology, it is imperative to quickly come up to speed and stay at the forefront of developments, which is no easy task for those not specifically trained in this area.

**Biopharmaceutical Drug Design and Development** edited by Susanna Wu-Pong and Yongyut Rojanasakul cuts a potentially wide swath in terms of its intended audience. It clearly is a primer for those not trained in the area or for those who wish to be brought into the mainstream of drug discovery and development in the world of biotechnology.

McGeer, Yasuo Ihara, 2012-12-06 In step with our growing lifespan dementia is becoming a widespread handicap to the health and well being of individuals and a burden on human society world wide The increasing prevalence of this tragic condition has stimulated an explosion of scientific research in the last ten years which resulted in numerous profound insights and technical innovations This timely volume presents both an overall and a detailed overview of the current worldwide knowledge about the neuroscientific basis of dementia Leading authorities in their fields provide a far reaching synthesis of all topics in dementia research including pathogenesis of dementia neuroimaging of the earliest alterations potential biological and genetic markers for Alzheimer s Disease and new therapeutic strategies Each chapter discusses clinical implications and areas of controversy highlights the wide range of current and future therapeutic possibilities and indicates promising directions for further research Advances in Amino Acid Mimetics and Peptidomimetics A. Abell, 1999-12-20 Peptidomimetics have found wide application as bioavailable and often potent mimetics of natural peptides They form the basis of important classes of enzyme inhibitors they act as receptor agonists and antagonists and they have even been used to mimic DNA structure Recent advances in the use of solid phase organic synthesis have paved the way for the preparation of libraries of these structures to allow the rapid optimization of their biological properties and hence therapeutic potential We are also beginning to gain a greater understanding of the structural features of this class of compounds that influence their ability to permeate membranes and their rate of clearance and metabolism This volume brings together many of these critical issues by highlighting recent advances in a number of core peptidomimetic based research *Neuroimmunology Research Focus* Paulo V. Broglio, 2007 Neuroimmunology is a rapidly

growing branch of biomedical science that studies of all aspects of the interactions between the immune system and nervous system. It deals with among other things the physiological functioning of the neuroimmune system in states of both health and disease, malfunctions of the neuroimmune system in disorders, autoimmune diseases, hypersensitivities, immune deficiency, the physical, chemical and physiological characteristics of the components of the neuroimmune system in vitro, in situ and in vivo. Despite the brain's status as an immune privileged site, an extensive bi-directional communication takes place between the nervous and the immune system in both health and disease. Immune cells and neuroimmune molecules such as cytokines, chemokines and growth factors modulate brain function through multiple signalling pathways throughout the lifespan. Immunological, physiological and psychological stressors engage cytokines and other immune molecules as mediators of interactions with neuroendocrine, neuropeptide and neurotransmitter systems. For example, brain cytokine levels increase following stress exposure while treatments designed to alleviate stress reverse this effect. This book presents leading research in the field.

*Enzyme Handbook* Dietmar Schomburg, Margit Salzmann, 2013-11-11. Enzymes are applied in organic synthesis and in analytical chemistry in industrial production processes of pharmaceuticals and in food processing. Finding a suitable enzyme for a desired transformation or with a defined specificity is not always an easy task. More than 3000 enzymes are well described to date. The *Enzyme Handbook* provides all the information for selecting the proper enzyme to perform defined transformations in a given environment. The *Enzyme Handbook* devotes a variable number of pages for each enzyme depending on the amount of information available with the EC number as ordering criterion within a volume. Revised data sheets can be released for individual enzymes and newly characterized enzymes and they can easily be sorted into the binders at the appropriate place. Each data sheet is divided into 7 sections: Nomenclature, EC number, Systematic name, Recommended name, Synonyms, CAS Reg No, Reaction and specificity, Catalysed reaction, Reaction type, Natural substrates, Substrate spectrum, Product spectrum, Inhibitors, Cofactors, prosthetic groups, Metal compounds, salts, Turnover number, Specific activity,  $K_M$  value, pH optimum, pH range, Temperature optimum, Temperature range, Enzyme structure, Molecular weight, Subunits, Glyco Lipoprotein, Isolation, Preparation, Source, organism, Source tissue, Localisation in source, Purification, Crystallization, Cloned, Renatured, Stability, pH, Temperature, Oxidation, Organic solvent, General stability, information, Storage, Cross References to Structure, Data Banks, Literature references.
