Ebensperger, Loren D. Hayes, 2016-02-18 Fully integrative approach to the sociobiology of caviomorph rodents Brings together research on social systems with that on epigenetic neuroendocrine and developmental mechanisms of social behavior Describes the social systems of many previously understudied caviomorph species identifying the fitness costs and benefits of social living in current day populations as well as quantified evolutionary patterns or trends Highlights potential parallels and differences with other animal models **Allophaiomys and the Age of the Olyor Suite, Krestovka Sections, Yakutia** Charles Albert Repenning, 1992 Microtine history indicates mosaic evolution and complex dispersal

patterns around the Northern Hemisphere by reflecting this history and evaluating stage of population evolution microtine biochronology can discriminate time periods as brief as 5 000 years Asdell's Patterns of Mammalian Reproduction Virginia Douglass Hayssen,Ari Van Tienhoven,Ans Van Tienhoven,1993 Since the appearance of the second edition of Sydney A Asdell s widely used Patterns of Mammalian Reproduction in 1964 the field of reproductive physiology has expanded dramatically Accordingly this revision adopts a different structure from previous editions substituting empirical delineations for physiological interpretations With the emphases now on a presentation of the published facts of mammalian reproduction it provides a thorough compilation of what is known about the basic reproductive biology of each of the 4300 mammalian species To gather information the authors examined more than 20 000 publications dating up to 1992 They used primary sources as much as possible supplementing them with English translations of Russian Finnish Chinese and Japanese journals The data are presented in taxonomic order Each familial account summarizes the pattern of reproduction for the family and provides lists of citations arranged by topic of the literature on the endocrinology reproductive anatomy and reproductive physiology of the family Following each account is a tabular listing of species specific data for neonatal mass and size weaning mass and size litter size age at sexual maturity estrous cycle length gestation length lactation length number of litters per year and seasonality of reproduction For each of these reproductive variables the range of data gleaned from the literature is given together with the source of each value listed Virginia Hayssen is Assistant Professor of Biology at Smith College Ari Van Tienhoven is Professor of Animal Physiology Emeritus at Cornell University Ans Van Tienhoven assisted in the compilation of data for the book Mammals of the Yukon Territory Phillip M. The History of British Mammals Derek Yalden,2010-01-31 As ice retreated from Britain 15 000 years ago a host of large mammals including reindeer wild horses woolly mammoths moose wolves brown bears lynxes and wolverines established itself in Britain The largest surviving wild land mammal today the red deer the largest contemporary land carnivore the badger and another 65 or so extant wild mammals included about a quarter of the wild mammals that have been introduced in the last 15 000 years The contemporary fauna however is largely dominated by domestic animals such as cattle sheep pigs and humans This book explores the fate of the large extinct species as well as how why and when the introduced species appeared **Bibliography of Medical Translations** ,1964 Evolution of the Rodents Philip G. Cox,Lionel Hautier,2015-08-06 A valuable resource for the latest research on rodents highlighting links across palaeontology developmental biology functional morphology phylogenetics and biomechanics **Bibliography on Rodent Pest Biology and Control, 1960-1969** World Health Organization,1971 *Annals of the Carnegie Museum* Carnegie Museum,Carnegie Museum of Natural History,1986 **Fennoscandian Tundra Ecosystems** P. Kallio,Frans Emil Wielgolaski,H. Kauri,E.

Ostbye,T. Rosswall,2012-12-06 Animals are important components of any ecosystem and it is impossible to describe structure and functioning of the Fennoscandian tundra ecosystems without including this part of the system However the strong diversity between functionally highly different fauna groups makes it impossible to study all groups in great detail with the funds and expertise available in Fennoscandia Relatively few productivity studies were carried out on animals in Fennoscandian tundra regions before the IBP projects started in 1969 1970 Within IBP more fauna groups have been investigated in the Norwegian tundra project than in the other countries due to better financial support Even in Norway however only a limited number of invertebrate and vertebrate taxons is studied General lack of information on the same animals in various parts of the Fennoscandian tundra makes it more difficult to present structural and functional comparisons of fauna for the whole region than in plants and microorganisms see Part 1 of Fennoscandian Tundra Ecosystems Brief surveys on faunal problems within the area are given in the introduction to the animal section and general aspects are also discussed in the four first papers of the volume *Squirrels of the World* Richard W. Thorington Jr.,John L. Koprowski,Michael A. Steele,James F. Whatton,2012-09-01 This is the most thorough treatment ever undertaken on the Sciuridae and promises to be the definitive book on squirrels for decades to come *Squirrels of the World* written by scientists with more than 100 years of collective experience studying these popular mammals is the first comprehensive examination of all 285 species of squirrels worldwide The authors reveal virtually every detail of the family Sciuridae which includes ground squirrels tree squirrels flying squirrels prairie dogs and chipmunks Each species from the familiar gray squirrel of American backyards to the exotic and endangered woolly flying squirrel of Pakistan is described in a detailed account that includes distinguishing characteristics ecology natural history conservation status and current threats to its existence *Squirrels of the World* includes stunning color photographs that document rare and unusual squirrels as well as common varieties evolution morphology ecology and conservation status colorful range maps marking species distribution images of the skull of each genus of squirrel extensive references Technical Translations ,1964-04 *Publications in Zoology* ,1975 **Polar Research** ,1995 **A Synopsis of Recent North American Microtine Rodents** Emmet Thurman Hooper,Barbara S. Hart,1962 **Mammalia** ,1999
