Energy Metabolism in Animals and Man Sir

Kenneth Lyon Blaxter,1989-06-29 Abstract This book discusses the factors which affect the heat produced by animals and man and the ways in which the energy of the organic components of their diets are used to support growth and reproduction The general thermodynamic principles are considered in addition to the physical principles related to heat loss by radiation convection conduction and evaporation of water Major parts of the book deal with the minimal or basal production of heat with the heat produced during muscular work and as a result of physiological reactions to the climatic environment The test is intended for undergraduates and postgraduates who are studying energy metabolism in the context of zoology agriculture ecology or medicine

Heat Loss from Animals and Man J. L. Monteith,L. E. Mount,2013-10-22 Heat Loss from Animals and Man Assessment and Control represents the Proceedings of the Twentieth Easter School in Agricultural Science held at the University Of Nottingham in 1973 The book explores the theme of heat loss beginning with statements about physical principles and progressing through a review of physiological and behavioral knowledge to a final session on a few of the economic implications of attempting to control human and animal environments A final chapter focusing on the topic of thermal neutrality where all participants were asked to comment on is added to the Proceedings in an attempt to reach a common view on this controversial matter Physicists physiologists and agriculturists will find the text interesting

Interactions of Man and His Environment Burgess H. Jennings,2012-12-06 This symposium was a joint effort co sponsored by Northwestern University and Borg Warner Corporation and included representatives of the latter day estates of univerSity industry and government All of these groups were deeply interested in participating since the problems of man and his environment especially his urban environ ment are ones which can be solved only through a cooperative effort The symposium proceedings present a review of the present position of man and his environment and outline the physical and social science efforts being made to solve the problems posed by man s rapidly changing environment The format of this book is such that Dr Luther L Terry s speech Environmental Health Every body s Business serves as an introduction to the many faceted dis cussions on the interactions of man and his environment Mr P B Gordon s speech Man and His Environment Where Are We Where Are We Going aptly summarizes this symposium and serves this purpose in this publication Every effort was exerted to make this symposium a general dis cussion meeting where contributions from both the formal speakers and the audience were received The records of two panel discussions including comments from the floor and replies by the speakers are included in this volume This publication is the result of the coordinated efforts of many contributors the speakers Northwestern University Borg Warner Corporation the Symposium Planning Committee consisting of D W

all express the concept of cold as an entity which attacks the body numbing and damaging it in the process Probably the richness of descriptive English in this area stems from the early experiences of a group of essentially tropical apes making their living on a cold and windswept island group half way between the Equator and the Arctic During a scientific education we soon learn that there is no such thing as cold only an absence of heat Cold does not invade us heat simply deserts Later still we come to appreciate that temperature is a reflection of kinetic energy and that the quantity of kinetic energy in a system is determined by the speed of molecular movement Despite this realization it is difficult to abandon the sensible prejudices of palaeolithic Homo sapiens shivering in his huts and caves For example appreciating that a polar bear is probably as comfortable when swimming from ice floe to ice floe as we are when swimming in the summer Mediterranean is not easy understanding the thermal sensations of a cold blooded earthworm virtually impossible We must always be wary of an anthropocentric attitude when considering the effects of cold on other species
