Singer, 2012-12-06 We know a great deal about historical climate and its variations from various geo logical studies There are two points worth remarking on One is that the climate changes frequently and radically but that the degree of variation and even sense of variation depends on the time scale which we are considering Secondly that this is a most unusual geological period for the Planet Earth we are living in a period of mountain building and glaciations whereas during most of the last 250 million years m y there was little ice and little topography A good view of climate change of the last hundred m y can be gained by looking at the paper of Kellogg We are now in a period of extensive glaciations The previous interval occurred 300 to 250 m y ago when even the Sahara was glaciated Of course it was at that time near the position of the South Pole we know that 300 m y ago the continents had not broken apart and formed one land mass Apparently between 250 and 20 m y ago there was little ice on the Earth even at Antarctica Continental basins were flooded by shallow seas This was the period when plant life and marine life proliferated and when most of our fossil fuels were laid down **The Evolution of Earth and Man** George Alfred Baitsell, 1929

Bhimeswara Challa,2021-06-29 Stagnate as a creepy caterpillar or transform into a beautiful butterfly this path breaking
book of a rare genre suggests is the seminal choice before mankind and every one of us In this setting the book raises some
fundamental questions What is man's rightful place in the cosmos and his manifest destiny on earth Why are we so self
righteously self destructive Are we a doomed species Or divine beings struggling to overcome the hubris of the human
intellect Is God getting weary of mankind How should we synergize human effort and Divine Grace The book posits that any
betterment in human behavior needs a cathartic change at the deepest levels That requires diluting the dominance of the
mind and reawakening the long dormant intelligence of the human heart To meet that challenge we need minimum numbers
a critical mass to create self sustained momentum for transformation through consciousness change And every single human
of this generation should behave in such a way that he or she is that single person whose transformation could make the
decisive species scale difference The book offers a menu of ideas and an agenda of action This book could be itself become an
input to mobilize that very critical mass it advocates for human transformation Well planned and cohesively written the book
is noteworthy for its delightful blend of information and arguments and reveals the depth of the author's understanding of
the human predicament This is a closely argued and thought provoking book The Hindu 13 Sept 2011 This book is a gripping
exposition on human nature and self transformation without preference to religion Challa has critically provided a
foundational argument for a deeper discussion of philosophical and practical ideals concerning self transformation
harmonizing the head and the heart is the way for humans to function as spiritual beings Recommended by the USR The US
Review of Books The author reflects upon the crisis of contemporary civilizations and outlines a blueprint for a new world
order based on progressive spiritual values and change of human consciousness The strength of this treatise is the sweep of
Challa's reach and his treatment of a vastly complex set of issues that bedevil humankind today India International Center
