## **Man And The Technological Society:**

The Technological System Jacques Ellul, 1980      **The Technological Society** Jacques Ellul, 2021-07-27 As insightful and wise today as it was when originally published in 1954 Jacques Ellul's *The Technological Society* has become a classic in its field laying the groundwork for all other studies of technology and society that have followed Ellul offers a penetrating analysis of our technological civilization showing how technology which began innocuously enough as a servant of humankind threatens to overthrow humanity itself in its ongoing creation of an environment that meets its own ends No conversation about the dangers of technology and its unavoidable effects on society can begin without a careful reading of this book A magnificent book He goes through one human activity after another and shows how it has been technicized rendered efficient and diminished in the process Harper's One of the most important books of the second half of the twentieth century In it Jacques Ellul convincingly demonstrates that technology which we continue to conceptualize as the servant of man will overthrow everything that prevents the internal logic of its development including humanity itself unless we take necessary steps to move human society out of the environment that technique is creating to meet its own needs *The Nation* A description of the way in which technology has become completely autonomous and is in the process of taking over the traditional values of every society without exception subverting and suppressing these values to produce at last a monolithic world culture in which all non technological difference and variety are mere appearance Los Angeles Free Press

**Jacques Ellul and the Technological Society in the 21st Century** Helena M. Jerónimo, José Luís García, Carl Mitcham, 2013-07-08 This volume rethinks the work of Jacques Ellul 1912 1994 on the centenary of his birth by presenting an overview of the current debates based on Ellul's insights As one of the most significant twentieth century thinkers about technology Ellul was among the first thinkers to realize the importance of topics such as globalization terrorism communication technologies and ecology and study them from a technological perspective The book is divided into three sections The first discusses Ellul's diagnosis of modern society and addresses the reception of his work on the technological society the notion of efficiency the process of symbolization de symbolization and ecology The second analyzes communicational and cultural problems as well as threats and trends in early twenty first century societies Many of the issues Ellul saw as crucial such as energy propaganda applied life sciences and communication continue to be so In fact they have grown exponentially on a global scale producing new forms of risk Essays in the final section examine the duality of reason and revelation They pursue an understanding of Ellul in terms of the depth of experience and the traditions of human knowledge which is to say on the one hand the experience of the human being as contained in the rationalist sociological and philosophical traditions On the other hand there are the transcendent roots of human existence as well as revealed knowledge in the mystical and religious traditions The meeting of these two traditions enables us to look at Ellul's work as a

whole but above all it opens up a space for examining religious life in the technological society **Risk In The Technological Society** Chris Hohenemser, Jeanne X Kasperson, 2019-06-26 In this book representatives of government industry universities and public interest groups consider the emerging art of risk assessment and discuss the issues and problems involved They look at two failures in technological risk management Three Mile Island and Love Canal examine the dimensions of technological risk tackle the difficult question of how safe is safe enough and offer a set of research priorities

Faith, Hope, and Love in the Technological Society Franz A. Foltz, Frederick A. Foltz, 2018-07-31 Franz and Frederick Foltz examine how modern technology creates an environment that significantly affects Christianity by reducing the mysteries of faith to manageable techniques The body of their work analyzes the effects of technology on the theological virtues of faith hope and love the triad that believers have used for a common narrative to understand and express their thoughts and experiences They begin by looking at how recent developments have brought us into a post truth era by removing words from their context in nature time place and community Popular theologies such as the power of positive thinking the laws of creation the plan for salvation and the prosperity gospel reflect this change by gearing all for efficiently getting what we want and ignoring tradition The authors then examine each of the virtues separately finding that faith has become a risk management tool that depends on confidence in systems rather than personal relationships hope is defined as the expectation that our present desires shall be granted rather than a vision of the future and love has become an intimacy that provides escape from the real world and community rather than a self denying care for them Finally the authors take a look at some appropriate responses Philosophy and Technology Carl Mitcham, Robert Mackey, 1983 From editors Carl Mitcham and Robert Mackey comes an unusually reflective and wide ranging colloquium on technology as a philosophical problem Organized into sections on conceptual issues ethical and political critiques religious critiques existentialist critiques and metaphysical studies Philosophy and Technology features an introductory overview that suggests the aims of truly comprehensive philosophy of technology Philosophy and Technology features essays by Jacques Ellul Lewis Mumford Ortega y Gasset and C S Lewis This revised and fully updated edition features a comprehensive bibliography Under Technology's Thumb William Leiss, 1990 Lucid and trenchant essays on the philosophy of nature arguing for an attitude of respect rather than domination of the environment We have according to Leiss communications Simon Fraser U no obligation to accept the imposition of new technologies but even if we do accept technological innovation we retain the right and duty to shape the applications and results according to our vision of the good society Annotation copyrighted by Book News Inc Portland OR

**Technology and Society: A Philosophical Guide** James Gerrie, 2018-05-30 Technology and Society provides an up to date introduction to the basic issues that have come to define the philosophy of technology What is technology Does technology control our lives What is technology's relation to ethics How does technology influence us Is the widespread belief in technological progress justified Later sections of the book examine the application of philosophy of technology to social

issues such as climate change urban sprawl and automation Major issues and arguments are presented in an accessible and non technical fashion giving the reader a firm foundation in the field

**The Future Without a Past** John Paul Russo,2005  
 Argues that technological imperatives like rationalization universalism monism and autonomy have transformed the humanities and altered the relation between humans and nature Examines technology and its impact on education historical memory and technological and literary values in criticism and theory concluding with an analysis of the fiction of Don DeLillo  
 Provided by publisher *Democracy in a Technological Society* L. Winner,2013-03-09 This ninth volume is one of the most ambitious in the Philosophy and Technology series Edited by technopolitical philosopher Langdon Winner it assembles an impressive collection of philosophers and political theorists to discuss one of the most important topics of the end of the twentieth century the bearing of technology in all its ramifications on the practice of democratic politics in the developed world When set beside the previous volume in the series *Europe America and Technology* the two together open a philosophical dialogue of great significance about the ways technology challenges democracy at its very roots Some philosophers think the attack is fatal Others are optimistic that democratic means can be discovered or invented for the control of technology Still others object to an optimism versus pessimism formulation of the issue But all agree that the issue is highly significant one that demands serious philosophical inquiry The Society for Philosophy and Technology was fortunate in being able to draw this group of writers to Bordeaux France in 1989 along with a large number of others whose contributions to the debate could not be included here It is equally fortunate to have chosen Langdon Winner as president when the time came to select the best of the papers to fashion this volume University of Delaware PAUL T

**Modernity and the Problem of Cultural Identity** A.P. Dubey,2008 The question of modernity and the problem of cultural Identity have been intensively debated from various points of view Three concepts of identity have been appreciated and emerged from lively deliberations during this discourse First concept being essentialist concept of identity has been defined to be one which is generated through self experience as self evident The second being post modern concept referred to as one which is independent of socio influences and likewise the third concept as realized in recent times is one that is based on realist view of identity According to this view identity is fundamental element of social liberation and oppression The book presents these three views of identity and their possible role in obviating and addressing the problems with possible alternatives If so implemented how they could bring the social individual and eventual leads in the society this book will certainly present a number of new solutions to the existing current problems

**Perspectives on Our Age** Jacques Ellul,1981 Originally broadcast on CBC Radio s Ideas as a series of interviews Ellul s first person approach here makes his ideas accessible to readers looking for new ways of understanding our society *Perspectives on Our Age* also gives unique new insight into Ellul s life his work and the origins and development

of his beliefs and theories      **Democratic Theory and Technological Society** Richard B. Day, Ronald Beiner, Joseph Masciulli, 2017-07-05 What are the chief challenges posed to contemporary democracy by modern technology and how can democratic theory best respond to or at least reflect on those challenges Inhabiting the kind of technologically advanced era in which we live what sources are available within political theory for theoretical insight concerning the problem of democratic engagement with technology The purpose of this volume is to canvas a broad range of theorists and theoretical traditions in order to address these questions including Hegel and Marx Rousseau and John Dewey Heidegger and Simone Weil Habermas and Walter Benjamin Hannah Arendt and Hans Jonas Commentaries on all these important thinkers focused on the issue of contemporary technology as posing unique social and political challenges for democratic political life yields rich and ambitious resources for theoretical reflection      **The Abdication of Philosophy — The Abdication of Man** G.A. Rauche, 2012-12-06 We live in a time of functionalism operationalism and technologism with all its levelling depersonalising and dehumanising effects In such an age the question arises of philosophy as critical reflective theory about the world man's position and purpose in the world and the relationship between philosophy and man as a free individual This book makes an attempt to give an answer to this question It has been written from great concern as to the future destiny of mankind in the light of various contemporary attempts at the abolition of philosophy and at merging it in practice as this practice is seen by the respective thinker or school of thought This work may be seen as representing an answer to such attempts as they are made for instance by the advocates of linguistic analysis or by representatives of the so called Frankfurt School respectively By an analysis of Western thought in general with emphasis on the present the author of this book seeks to show that the abdication of philosophy as critical reflective theory leads to the abdication of man as a critical reflective individual one that is free to dissent and to say No to the system Man is perverted and alienated from his true nature He is forced to conform and to lead an unauthentic existence within the system      **The Technological Bluff** Jacques Ellul, 1990 M Ellul's view of technology is that once it is let out of the laboratory technology cannot be turned off Technology begets more technology The modern world therefore is one in which more technology is inevitable Fixing or remediating the impact of a technology like water pollution requires you guessed it more technology      *Modern Science and the Capriciousness of Nature* K. Rogers, 2006-10-10 This book questions the way that modern science and technology are considered able to liberate society from the erratic forces of nature Modern science is implicated in a gamble on a technological society that will replace the natural world with a better one The author questions the rationality of this gamble and its implications for our lives
