Radiative Transfer In Scattering And Absorbing Atmospheres:

Radiative Transfer in Scattering and Absorbing Atmospheres Jacqueline Lenoble, 1985 **Radiative Transfer in the Atmosphere and Ocean** Gary E. Thomas, Knut Stamnes, 2002-01-28 Provides a foundation of the theoretical and practical aspects of radiative transfer for the atmospheric oceanic and environmental sciences **Radiative Transfer in the Atmosphere and Ocean** Knut Stamnes, Gary E. Thomas, Jakob J. Stamnes, 2017-07-13 This updated edition provides a foundation of theoretical and practical aspects of radiative transfer for students and researchers in atmospheric oceanic and environmental sciences *Wave Scattering in Complex Media: From Theory to Applications* Bart A. van Tiggelen, Sergey E. Skipetrov, 2012-12-06 A collection of lectures on a variety of modern subjects in wave scattering including fundamental issues in mesoscopic physics and radiative transfer recent hot topics such as random lasers liquid crystals lefthanded materials and time reversal as well as modern applications in imaging and communication There is a strong emphasis on the interdisciplinary aspects of wave propagation including light and microwaves acoustic and elastic waves propagating in a variety of complex materials liquid crystals media with gain natural media magneto optical media photonic and phononic materials etc It addresses many different items in contemporary research mesoscopic fluctuations localization radiative transfer symmetry aspects and time reversal It also discusses new potential applications in telecommunication soft matter and imaging *Radiative Transfer in the Atmosphere and Ocean* Knut Stamnes, Gary E. Thomas, Jakob J. Stamnes, 2017-07-13 This new and completely updated edition gives a detailed description of radiative transfer processes at a level accessible to advanced students The volume gives the reader a basic understanding of global warming and enhanced levels of harmful ultraviolet radiation caused by ozone depletion It teaches the basic physics of absorption scattering and emission processes in turbid media such as the atmosphere and ocean using simple semi classical models The radiative transfer equation including multiple scattering is formulated and solved for several prototype problems using both simple approximate and accurate numerical methods In addition the reader has access to a powerful state of the art computational code for simulating radiative transfer processes in coupled atmosphere water systems including snow and ice This computational code can be regarded as a powerful educational aid but also as a research tool that can be applied to solve a variety of research problems in environmental sciences Atmospheric Radiation James A. Coakley Jr., Ping Yang, 2014-06-26 This textbook is a first look at radiative transfer in planetary atmospheres with a particular focus on the Earth s atmosphere and climate It covers the basics of the radiative transfer of sunlight treating absorption and scattering and the transfer of the thermal infrared The examples included show how the solutions of the radiative transfer equation are used to evaluate changes in the Earth s energy budget due to changes in atmospheric composition how these changes lead to climate change and also how remote sensing can be used to probe the thermal structure and composition of planetary atmospheres The examples motivate students by leading them to a better understanding of and appreciation for the

computer generated numerical results Aimed at upper division undergraduates and beginning graduate students in physics and atmospheric sciences the book is designed to cover the essence of the material in a 10 week course while the material in the optional sections will facilitate its use at the more leisurely pace and in depth focus of a semester course *An Introduction to Atmospheric Radiation* K. N. Liou, 2002-04-29 Fundamentals of radiation for atmospheric applications Solar radiation at the top of the atmosphere Absorption and scattering of solar radiation in the atmosphere Thermal infrared radiation transfer in the atmosphere Light scattering by atmospheric particulates Principles of radiative transfer in planetary atmospheres Application of radiative transfer principles to remote sensing Radiation and climate **Atmospheric Science** John M. Wallace, Peter V. Hobbs, 2006-03-24 Atmospheric Science Second Edition is the long awaited update of the classic atmospheric science text which helped define the field nearly 30 years ago and has served as the cornerstone for most university curricula Now students and professionals alike can use this updated classic to understand atmospheric phenomena in the context of the latest discoveries and prepare themselves for more advanced study and real life problem solving This latest edition of Atmospheric Science has been revamped in terms of content and appearance It contains new chapters on atmospheric chemistry the Earth system the atmospheric boundary layer and climate as well as enhanced treatment of atmospheric dynamics radiative transfer severe storms and global warming The authors illustrate concepts with full color state of the art imagery and cover a vast amount of new information in the field Extensive numerical and qualitative exercises help students apply basic physical principles to atmospheric problems There are also biographical footnotes summarizing the work of key scientists along with a student companion website that hosts climate data answers to quantitative exercises full solutions to selected exercises skew T log p chart related links appendices and more The instructor website features instructor s guide solutions to quantitative exercises electronic figures from the book plus supplementary images for use in classroom presentations Meteorology students at both advanced undergraduate and graduate levels will find this book extremely useful Full color satellite imagery and cloud photographs illustrate principles throughout Extensive numerical and qualitative exercises emphasize the application of basic physical principles to problems in the atmospheric sciences Biographical footnotes summarize the lives and work of scientists mentioned in the text and provide students with a sense of the long history of meteorology Companion website encourages more advanced exploration of text topics supplementary information images and bonus exercises **Short-Wave Solar Radiation in the Earth's Atmosphere** Irina N. Melnikova, Alexander V. Vasilyev, 2005 Based on data from an experiment which ran for ten years this book summarizes the results of the Atmospheric Physics Department of the St Petersburg University and the Main Geophysical Observatory The processed data now forms a rich dataset of spectral values of radiative characteristics under different atmospheric conditions The analysis of this database clearly shows that the solar radiative absorption in a dusty and cloudy atmosphere is significantly higher than assumed to date Both graduate students of atmospheric sciences as well as scientists and

researchers in the field of meteorology and climatology will find a wealth of new data and information in this monograph

Development of an AOTF-based Hyperspectral Imager for Atmospheric Remote Sensing Emmanuel Dekemper, 2014-11-07

This work addresses important aspects in the development of a new spaceborne instrument called ALTIUS. The imaging capability is first applied to the inversion of atmospheric pressure profiles from the analysis of the apparent flattening of a setting
