Frank, Bruce W. Long, Jeannean Hall Rollins, Barbara J. Smith, 2013-08-13 With more than 400 projections presented Merrill's Atlas of

Radiographic Positioning and Procedures remains the gold standard of radiographic positioning texts. Authors Eugene Frank, Bruce Long, and Barbara Smith have designed this comprehensive resource to be both an excellent textbook and also a superb clinical reference for practicing radiographers and physicians. You will learn how to properly position the patient so that the resulting radiograph provides the information needed to reach an accurate diagnosis. Complete information is included for the most common projections as well as for those less commonly requested. Comprehensive coverage of anatomy and positioning makes Merrill's Atlas the most in-depth text and reference available for radiography students and practitioners. Essential projections that are frequently performed are identified with a special icon to help you focus on what you need to know as an entry-level radiographer. Full-color presentation helps visually clarify key concepts. Summaries of pathology are grouped in tables in positioning chapters for quick access to the likely pathologies for each bone group or body system. Special chapters including trauma, surgical radiography, geriatrics, pediatrics, and bone densitometry help prepare you for the full scope of situations you will encounter. Exposure technique charts outline technique factors to use for the various projections in the positioning chapters. Projection summary tables at the beginning of each procedural chapter offer general chapter overviews and serve as handy study guides. Bulleted lists provide clear instructions on how to correctly position the patient and body part. Anatomy summary tables at the beginning of each positioning chapter describe and identify the anatomy you need to know in order to properly position the patient, set exposures, and take high-quality radiographs. Anatomy and positioning information is presented in separate chapters for each bone group or organ system, all heavily illustrated in full color and augmented with CT scans and MRI images to help you learn both traditional and cross-sectional anatomy. Includes a unique new section on working with and positioning obese patients. Offers coverage of one new compensating filter. Provides collimation sizes and other key information for each relevant projection. Features more CT and MRI images to enhance your understanding of cross-sectional anatomy and prepare you for the Registry exam. Offers additional digital images in each chapter, including stitching for long-length images of the spine and lower limb. Standardized image receptor sizes use English measurements with metric in parentheses. Depicts the newest equipment with updated photographs and images.

Bontrager's Textbook of Radiographic Positioning and Related Anatomy - E-Book John Lampignano, Leslie E. Kendrick, 2017-03-07. Master radiographic positioning with this comprehensive user-friendly text. Focusing on one projection per page, Bontrager's Textbook of Radiographic Positioning and Related Anatomy, 9th Edition, includes all of the positioning and projection information you need to know in a clear, bulleted format. Positioning photos, radiographic images, and radiographic overlays presented side-by-side with the explanation of each procedure show you how to visualize anatomy and produce the most accurate images. Updated to reflect the latest ARRT competencies and ASRT curriculum guidelines, it features more than 200 of the most commonly requested projections to prepare you for clinical practice. Labeled radiographs, radiographic overlays, identify key radiographic anatomy and landmarks to help you recognize anatomy and determine if you

have captured the correct diagnostic information on your images Positioning chapters organized with one projection per page present a manageable amount of information in an easily accessible format Unique page layout with positioning photos radiographic images and radiographic overlays presented side by side with the text explanation of each procedure to facilitate comprehension and retention Pathologic Indications list and define the pathologies most likely to be encountered during procedures covered in each chapter to help you understand the whole patient and improve your ability to produce radiographs that make diagnosis easy for the physician Pathology Demonstrated sections explain why a particular projection is needed or what pathology might be demonstrated to give you a larger frame of reference and a better understanding of the reasoning behind each projection Radiographic Criteria on positioning pages provide standards for evaluating the quality of each radiograph helping you develop a routine for evaluating radiographic quality Pediatric Applications prepare students for clinical success and prepare technologists to deal competently with the special needs of their pediatric patients Geriatric Applications include general information on positioning techniques and patient handling for geriatric patients fostering an understanding of the challenges these patients present to the technologist Critique Radiographs demonstrate positioning errors and help you avoid similar errors in clinicals Instructor resources include an accompanying Evolve website with PowerPoint slides an image collection and a test bank to help instructors prepare for class Student resources include a workbook and handbook to help you better understand and retain complicated material *Whitaker's Cumulative Book List*, 1984 *American Book Publishing Record Cumulative, 1950-1977* R.R.
