Phenolic Resins: A Century of Progress Louis Pilato, 2010-03-10 The legacy of Leo Hendrik Baekeland and his development of

phenol formaldehyde resins are recognized as the cornerstone of the Plastics Industry in the early twentieth century and phenolic resins continue to flourish after a century of robust growth. On July 13 1907 Baekeland led his heat and pressure patent related to the processing of phenol formaldehyde resins and identified their unique utility in a plethora of applications. The year 2010 marks the Centennial Year of the production of phenolic resins by Leo Baekeland. In 1910 Baekeland formed Bakelite GmbH and launched the manufacture of phenolic resins in Erkner. In May 1910 In October 1910 General Bakelite began producing resins in Perth Amboy New Jersey. Lastly Baekeland collaborated with Dr Takamine to manufacture phenolic resins in Japan in 1911. These events were instrumental in establishing the Plastics Industry and in tracing the identity to the brilliance of Dr Leo Baekeland. Phenolic resins remain as a versatile resin system featuring either a stable thermoplastic novolak composition that cures with a latent source of formaldehyde hexa or a heat reactive and perishable resole composition that cures thermally or under acidic or special basic conditions. Phenolic resins are a very large volume resin system with a worldwide volume in excess of 5 million tons year and its growth is related to the gross national product GNP growth rate globally.
