Restructuring Telecommunications P. Curwen, 1997-10-27 The first of January 1998 was the deadline for market liberalisation within the European Union which together with the passing of the USA Telecommunications Act has served to open up major markets in the Telecommunications Industry This book examines the changes that have been occurring in the industry in recent years seeking to impose a coherent structure upon a rapidly changing environment It includes case studies of the UK Germany and the USA *The Privatisation of European Telecommunications* Johan From, Kjell A.

Eliassen, 2017-11-28 This international volume presents a comprehensive comparative study of the transformation of the European telecommunications industry from 1990 to the present The book focuses on the old incumbent operators and their dramatic change from state agencies to listed companies It analyzes the liberalization process as well as the corporatization and privatization of these companies The contributors assess the conditions for the transformations taking place the driving forces for change the effects to management the efforts of the EU during these processes and ultimately the role of the private owner Political science publications have all but excluded analysis of the newly privatized companies their contribution to the liberalization process both before and after privatization and the interplay between the national political and company levels The book redresses this shortcoming and also features a double empirical focus in that the main national incumbents in Europe are analyzed and compared to Telenor the Norwegian former incumbent **The International**

Telecommunications Regime: Domestic Preferences and Regime Change Juan Ratto-Nielsen, 2009-12-26 This study examines the evolution of the international regime in telecommunications with the main objective of furthering our understanding of the process of regime transformation The dominant theories of international relations realism and institutional liberalism specify how states with shared interests use institutions to realize joint gains and to minimize the possibility of defection But these theories have little to say about when states will attempt to change the objectives that lead them to create the international institution in the first place The main goal of this book is to investigate and test the assumption that domestic politics by themselves can explain the dynamics of regime creation evolution and change as it happened within the International Telecommunications Union ITU Contemporary Issues and Debates in EU Policy

within those rubrics Case studies focus on France Germany Italy Japan Korea Taiwan and the transition economies of Eastern Europe

International Communication Daya Kishan Thussu, 2018-12-27 The third edition of *International Communication* examines the profound changes that have taken place and are continuing to take place at an astonishing speed in international media and communication Building on the success of previous editions this book maps out the expansion of media and telecommunications corporations within the macro economic context of liberalisation deregulation and privatisation It then goes on to explore the impact of such growth on audiences in different cultural contexts and from regional national and international perspectives Each chapter contains engaging case studies which exemplify the main concepts and arguments

Applied Welfare Economics Massimo Florio, 2014-02-05 What is the effect of a new infrastructure on the well being of a local community Is a tax reform desirable Does the privatization of a telecommunication provider increase social welfare To answer these questions governments and their policy advisors should have in mind an operative definition of social welfare and cannot rely on simple official statistics such as GDP The price we observe are often misleading as welfare signals and costs and benefits for the society should be based on shadow prices revealing the social opportunity costs of goods and of changes of the world This book explains how to apply these welfare economics ideas to the real world After a theoretical discussion of the concept of social welfare a critical analysis of the traditional doctrine of welfare economics embodied in the Two Fundamental Theorems and a presentation of social cost benefit analysis the book introduce the readers to an applied framework This includes the empirical estimation of shadow prices of goods of the social cost of labour and capital the assessment of risk This book also includes the state of the art of international experience with CBA including ex post evaluation of major projects economic rates of return in different sectors and a case study on privatisation is presented This book offers a unique and original blend of theory empirics and experience The theoretical discussion clarifies why shadow prices are not virtual market equilibrium prices as they arise as the solution of a planning problem often with governments and economic agents constrained in their information and powers The empirical chapters show how to compute proxies of the shadow prices in simple ways The experience chapters draw from first hand research gained by the Author and his collaborators over many years of advisory work for the European Commission and other international and national institutions
