Rethinking Green Politics John Barry, 1998-12-15 W J M MacKenzie Prize winner for the best book in Political Science published in 1999 Of the sixteen books submitted some of high quality this one was agreed to be in a class of its own The book breaks new ground in green political theory and in an engaging manner educates those anxious to be good citizens and challenges those responsible for public policy in a highly topical and globally important discourse Barry's immanent critique his insistence that we build on what there is his resistance to the easy anti-statist line his sane and balanced outlook is intellectually brave in this often rather clamant territory The analysis of ecological morality individual stewardship and collective responsibility provides an original and seminal treatise that advances the discipline as a whole Professor Andrew Dunsire

Political Nature John M. Meyer, 2001-07-20 Concern over environmental problems is prompting us to reexamine established thinking about society and politics The challenge is to find a way for the public s concern for the environment to become more integral to social

economic and political decision making Two interpretations have dominated Western portrayals of the nature politics relationship what John Meyer calls the dualist and the derivative The dualist account holds that politics and human culture in general is completely separate from nature The derivative account views Western political thought as derived from conceptions of nature whether Aristotelian teleology the clocklike mechanism of early modern science or Darwinian selection Meyer examines the nature politics relationship in the writings of two of its most pivotal theorists Aristotle and Thomas Hobbes and of contemporary environmentalist thinkers He concludes that we must overcome the limitations of both the dualist and the derivative interpretations if we are to understand the relationship between nature and politics Human thought and action says Meyer should be considered neither superior nor subservient to the nonhuman natural world but interdependent with it In the final chapter he shows how struggles over toxic waste dumps in poor neighborhoods land use in the American West and rainforest protection in the Amazon illustrate this relationship and point toward an environmental politics that recognizes the experience of place as central

The Political Prospects of a Sustainability Transformation Daniel Hausknost, Marit Hammond, 2021-06-14 Half a century ago many democratic states started to respond to environmental pressures that had arisen in the wake of rapid industrialization They set up environmental ministries and agencies and issued legislation to control the pollution of air and water and to manage industrial processes wastes and toxic substances This was the birth of the environmental state With planetary ecological challenges like climate change spiraling out of control and dwarfing the environmental state's classical tasks of environmental management new questions about the transformative capacities of the state are becoming acute today How large is the state's capability to transform enhanced industrial societies into sustainable post carbon societies Do its new environmental functions empower the state to prioritise ecological goals over economic growth Can the state's environmental management capabilities be radicalised to turn it into a sustainability state Can democracies be enhanced to enlarge the state's transformative capacities The Political Prospects of a Sustainability Transformation Moving Beyond the

Climate Action and Civil Society in Turkey and Germany Hande Paker, 2025-09-04 This book explores the social and political dynamics that shape the impacts of climate change drawing upon Turkey and Germany to offer a comprehensive comparative analysis Civil society representatives the climate movement the youth and arts and culture actors from around the world unequivocally call for a deep transformation of political economic and social structures in order to avoid the devastating effects of climate change The transformation that is prescribed is perceived as insufficient technocratic and market based and does not involve challenging power relations at the heart of climate action This book addresses these concerns using a comparative analysis to explore the issues and efficiency of a meaningful sustainable transition The in depth comparison of two conventionally dissimilar cases Turkey and Germany demonstrates that civil society actors in different political settings can use similar strategies and frames for climate action against state actors In turn states use similar depoliticization strategies albeit via different mechanisms and economic growth narratives to reproduce hegemony The book untangles the different processes that create the contentious politicized common ground in which these stakeholders interact with each other The findings of this research have significant implications for many developing and developed countries alike where climate policymaking is painstakingly inadequate This book will be of interest to students researchers and academics interested in political ecology climate politics and politics of development

Postpositivist International Relations Theory Amartya Mukhopadhyay, 2023-10-16 This book discusses postpositivist theories foregrounding postpositivism against the reigning realist and positivist pluralist orthodoxies The book explicates seven theories not as disparate endeavours but as developments linked by a common thread that seeks to enunciate globalist emancipatory goals for the theoretical field and the world that these theories seek to change It focuses on the following themes feminism environmentalism or green theory the English School critical theory constructivism postmodernism and postcolonialism Additionally a separate chapter on globalization shows that while mainstream neo realist international relations theories respond hostilely to globalization and liberal pluralist theories react benignly to it postpositivist theories positively welcome it The book offers a competent meta theoretical gridwork showing on which side of the opposing disciplinary positions in the fourth debate each of the seven theories are located It is a comprehensive guide to the postpositivist restructuring of the discipline of international relations This book will be of interest to researchers and
