Diagnosis of Primary Open Angle Glaucoma R.N. Weinreb, D.F. Garway-Heath, C. Leung, F.A. Medeiros, J. Liebmann, 2017-05-10 Primary Open Angle Glaucoma was the topic of the tenth World Glaucoma Association Consensus meeting As with prior meetings it was a daunting task to seek and obtain consensus on broad subject matter that ranges from diagnosis risk profiling and screening of the disease As it is unclear how each of us decides how we practice and the evidence to guide us often is sparse this consensus as well as the others is based not only on the published literature but also on expert opinion Although consensus does not replace and is not a surrogate for scientific investigation it does provide considerable value especially when the desired evidence is lacking The goal of this consensus is to provide a foundation for diagnosing and managing primary open angle glaucoma and how it can be best done in clinical practice Identification of those areas for which we have little evidence and therefore the need for additional research always is a high priority We hope that this consensus report will serve as a benchmark of our understanding However this consensus report is intended to be fluid It is expected that it will be revised and improved with the emergence of new evidence
