Principles of Modern Radar Missile Seekers Evgeny Markin, 2022-02-28. This book gives you an in-depth look into the critical function of interference shielding for onboard radar of anti-aircraft missile systems. Intended for radar engineers and technicians specializing in anti-aircraft defense, the book reviews today's military and geopolitical threats, helps you understand the functional needs of the various radar and anti-missile systems to meet those threats, and synthesizes considerations for devising practical and effective protection against interferences that affect the homing heads of anti-aircraft guided missiles. Three problematic interferences are presented and discussed in detail: polarization interference, interference to the sidelobe of onboard antennas, and interference from two points in space, including interference reflected from the earth/water surface. The book covers the basic principles of radiolocation, including monopulse radars, and gives insight into the fundamental functional units of anti-aircraft missiles and surface-to-air missile systems. The book presents guidance methods, systems of direction-finding problems on firing over the horizon, and questions of accuracy and resolution, all important for better addressing solutions of interference shielding. You will learn how to estimate the stability of target auto-tracking under conditions of cited interferences and better assess existing limitations on firing over the horizon by a long-range anti-aircraft system as well as hypersonic targets and satellites. This is a unique and valuable resource for engineers and technicians who are involved in the design and development of anti-aircraft guided missile systems with special emphasis on interference immunity and protection. It can also be used as a textbook in advanced radar technology coursework and seminars.

Radar for Fully Autonomous Driving Matt Markel, 2022-04-30. This is the first book to bring together the increasingly complex radar/automotive technologies and tools being explored and utilized in the development of fully autonomous vehicles. Technologies and tools now understood to be an essential need for the field to fully mature. The book presents state-of-the-art knowledge as shared by the best and brightest experts working in the automotive radar industry today: leaders who have been there and done that. Each chapter is written as a standalone master class with the authors seeing the topic through their eyes and experiences. Where beneficial, the chapters reference one another but can otherwise be read in any order desired, making the book an excellent go-to reference for a particular topic or review you need to understand. You'll get a big picture tour of the key radar needs for fully autonomous vehicles and how achieving these needs is complicated by the automotive environment's dense scenes, number of possible targets of interest, and mix of very large and very small returns. You'll then be shown the challenges from and mitigations to radio frequency interference (RFI), an ever-increasing challenge as the number of vehicles with radars and radars per vehicle grow. The book also dives into the impacts of weather on radar.

performance providing you with insights gained from extensive real world testing You are then taken through the integration and systems considerations especially regarding safety computing needs and testing Each of these areas is influenced heavily by the needs of fully autonomous vehicles and are open areas of research and development With this authoritative volume you will understand How to engage with radar designers from a system integrator OEM standpoint How to structure and set requirements for automotive radars How to address system safety needs for radars in fully autonomous vehicles How to assess weather impact on the radar and its ability to support autonomy How to include weather effects into specifications for radars This is an essential reference for engineers currently in the autonomous vehicle arena and or working in automotive radar development as well as engineers and leaders in adjacent radar fields needing to stay abreast of the rapid developments in this exciting and dynamic field of research and development Engineering UAS Applications: Sensor Fusion, Machine Vision and Mission Management Jesús Garcia, José M. Molina, Juan Pedro Llerena, Daniel Amigo, David

Sánchez Pedroche, 2023-07-31 Unmanned aerial systems UAS have evolved rapidly in recent years thanks to advances in microelectromechanical components navigation perception and artificial intelligence allowing for a fast development of autonomy This book presents general approaches to develop test and evaluate critical functions such as navigation obstacle avoidance and perception and the capacity to improve performance in real and simulated scenarios It provides the practical knowledge to install analyze and evaluate UAS solutions working in real systems illustrates how to use and configure complete platforms and software tools and reviews the main enabling technologies applied to develop UAS possibilities and evaluation methodology You will get the tools you need to evaluate navigation and obstacle avoidance functions object detection and planning and landing alternatives in simulated conditions The book also provides helpful guidance on the integration of additional sensors video weather meteorological and communication networks to build IoT solutions This is an important book for practitioners and researchers interested in integrating advanced techniques in the fields of AI sensor fusion and mission management and anyone interest in applying and testing advanced algorithms in UAS platforms
