Nedjalkov,Galina A. Otaina,2013-09-25 This volume originally published in Russian in 2012 is one of the few larger works on Nivkh Gilyak an underinvestigated endangered Paleosiberian language isolate that have appeared lately It is a descriptive grammar based on extensive language data and supplemented with the authors experiments and subtle analysis aimed at

elucidating some moot points of the highly specific Nivkh syntax and with quantitative data. It focuses on syntactic and semantic types of verbs and their aspectual and temporal characteristics, various groups of verbal grammatical morphemes, the use of finite and non-finite verb forms and especially on numerous converbs, sentence types, word order, two-predicate constructions, relative clauses, direct and indirect speech, text structure and cohesion. The typological expertise and insights of V. P. Nedjalkov and the native intuitions of G. A. Otalina combine to add value to this volume. The book will be of interest to specialists in morphosyntax, typology, general linguistics and indigenous languages.

Random Processes for Engineers Arthur David Snider, 2017-01-27. This book offers an intuitive approach to random processes and educates the reader on how to interpret and predict their behavior. Premised on the idea that new techniques are best introduced by specific low-dimensional examples, the mathematical exposition is easier to comprehend and more enjoyable, and it motivates the subsequent generalizations. It distinguishes between the science of extracting statistical information from raw data (e.g. a time series about which nothing is known a priori) and that of analyzing specific statistical models such as Bernoulli trials, Poisson queues, ARMA and Markov processes. The former motivates the concepts of statistical spectral analysis such as the Wiener-Khinchine theory, and the latter applies and interprets them in

specific physical contexts The formidable Kalman filter is introduced in a simple scalar context where its basic strategy is transparent and gradually extended to the full blown iterative matrix form **"Say It Again, Sam"** Grenville JR
