*Selected Topics In Geometry With Classical Vs. Computer Proving* Pavel Pech, 2007-11-12 This textbook presents various automatic techniques based on Gr bner bases elimination to prove well known geometrical theorems and formulas Besides proving theorems these methods are used to discover new formulas solve geometric inequalities and construct objects which cannot be easily done with a ruler and compass Each problem is firstly solved by an automatic theorem proving method Secondly problems are solved classically without using computer where possible so that readers can compare the strengths and weaknesses of both approaches

Rational Transformations, Virgil Snyder, 1928      Hiding Data - Selected Topics Rudolf Ahlswede, 2016-04-18 Devoted to information security this volume begins with a short course on cryptography mainly based on lectures given by Rudolf Ahlswede at the University of Bielefeld in the mid 1990s It was the second of his cycle of lectures on information theory which opened with an introductory course on basic coding theorems as covered in Volume 1 of this series In this third volume Shannon's historical work on secrecy systems is detailed followed by an introduction to an information theoretic model of wiretap channels and such important concepts as homophonic coding and authentication Once the theoretical arguments have been presented comprehensive technical details of AES are given Furthermore a short introduction to the history of public key cryptology RSA and El Gamal cryptosystems is provided followed by a look at the basic theory of elliptic curves and algorithms for efficient addition in elliptic curves Lastly the important topic of oblivious transfer is discussed which is strongly connected to the privacy problem in communication Today the importance of this problem is rapidly increasing and further research and practical realizations are greatly anticipated This is the third of several volumes serving as the collected documentation of Rudolf Ahlswede's lectures on information theory Each volume includes comments from an invited well known expert In the supplement to the present volume Rüdiger Reischuk contributes his insights Classical information processing concerns the main tasks of gaining knowledge and the storage transmission and hiding of data The first task is the prime goal of Statistics For transmission and hiding data Shannon developed an impressive mathematical theory called Information Theory which he based on probabilistic models The theory largely involves the concept of codes with small error probabilities in spite of noise in the transmission which is modeled by channels The lectures presented in this work are suitable for graduate students in Mathematics and also for those working in Theoretical Computer Science Physics and Electrical Engineering with a background in basic Mathematics The lectures can be used as the basis for courses or to supplement courses in many ways Ph D students will also find research problems often with conjectures that offer potential subjects for a thesis More advanced researchers may find questions which form the basis of entire research programs

Select Topics in Signal Analysis Harish Parthasarathy, 2022-10-20 This book developed from a course given by the author to undergraduate and postgraduate students It takes up Matrix Theory Antenna Theory and Probability Theory in detail The first chapter on matrix theory discusses in reasonable depth the theory of Lie Algebras leading up to Cartan's Classification Theory It also discusses some basic elements of Functional Analysis and Operator Theory in infinite dimensional Banach and Hilbert spaces The second chapter discusses Basic Probability Theory and the topics discussed find applications to Stochastic Filtering Theory for differential equations driven by white Gaussian noise The third chapter is on Antenna Theory with a focus on Modern Quantum Antenna Theory The book will be a valuable resource to students and early career researchers in the field of Mathematical Physics      Polynomials with Special Regard to Reducibility A. Schinzel, 2000-04-27 This book covers most of the known results on reducibility of polynomials over arbitrary fields algebraically closed fields and finitely

generated fields Results valid only over finite fields local fields or the rational field are not covered here but several theorems on reducibility of polynomials over number fields that are either totally real or complex multiplication fields are included Some of these results are based on recent work of E Bombieri and U Zannier presented here by Zannier in an appendix The book also treats other subjects like Ritt s theory of composition of polynomials and properties of the Mahler measure and it concludes with a bibliography of over 300 items This unique work will be a necessary resource for all number theorists and researchers in related fields     Selected Topics in Complex Analysis Vladimir Ya. Eiderman, Mikhail V. Samokhin, 2006-03-30

This volume is dedicated to the memory of the outstanding mathematician S Ya Khavinson It begins with an expository paper by V P Havin presenting a comprehensive survey of Khavinson s works as well as certain biographical material The complete bibliography following this paper has not previously been published anywhere It consists of 163 items a considerable part of these cannot be found in easily accessible sources The book also contains a series of photographs and twelve original peer reviewed research and expository papers by leading mathematicians worldwide including the joint paper by S Ya Khavinson and T S Kuzina the last publication of S Ya Khavinson     **Computer Algebra and Polynomials** Jaime Gutierrez, Josef Schicho, Martin Weimann, 2015-01-20 Algebra and number theory have always been counted among the most beautiful mathematical areas with deep proofs and elegant results However for a long time they were not considered that important in view of the lack of real life applications This has dramatically changed nowadays we find applications of algebra and number theory frequently in our daily life This book focuses on the theory and algorithms for polynomials over various coefficient domains such as a finite field or ring The operations on polynomials in the focus are factorization composition and decomposition basis computation for modules etc Algorithms for such operations on polynomials have always been a central interest in computer algebra as it combines formal the variables and algebraic or numeric the coefficients aspects The papers presented were selected from the Workshop on Computer Algebra and Polynomials which was held in Linz at the Johann Radon Institute for Computational and Applied Mathematics RICAM during November 25 29 2013 at the occasion of the Special Semester on Applications of Algebra and Number Theory     Number Theory and Polynomials James Fraser McKee, Chris Smyth, 2008-05-08 Contributions by leading experts in the field provide a snapshot of current progress in polynomials and number theory     **Selected Topics in Graph Theory** Lowell W. Beineke, Robin J. Wilson, 1988

*Shape-Preserving Approximation by Real and Complex Polynomials* Sorin G. Gal, 2010-06-09 First comprehensive treatment in book form of shape preserving approximation by real or complex polynomials in one or several variables Of interest to grad students and researchers in approximation theory mathematical analysis numerical analysis Computer Aided Geometric Design robotics data fitting chemistry fluid mechanics and engineering Contains many open problems to spur future research Rich and updated bibliography     **Computational and Algorithmic Problems in Finite Fields** Igor Shparlinski, 2012-12-06 This volume presents an exhaustive treatment of computation and algorithms for finite fields Topics

*Graph Coloring Problems* Tommy R. Jensen, Bjarne Toft, 2011-10-24 Contains a wealth of information previously scattered in research journals conference proceedings and technical reports Identifies more than 200 unsolved problems Every problem is stated in a self contained extremely accessible format followed by comments on its history related results and literature The book will stimulate research and help avoid efforts on solving already settled problems Each chapter concludes with a comprehensive list of references which will lead readers to original sources important contributions and other surveys

**Emerging Applications of Algebraic Geometry** Mihai Putinar, Seth Sullivant, 2008-12-10 Recent advances in both the theory and implementation of computational algebraic geometry have led to new striking applications to a variety of fields of research The articles in this volume highlight a range of these applications and provide introductory material for topics covered in the IMA workshops on Optimization and Control and Applications in Biology Dynamics and Statistics held during the IMA year on Applications of Algebraic Geometry The articles related to optimization and control focus on burgeoning use of semidefinite programming and moment matrix techniques in computational real algebraic geometry The new direction towards a systematic study of non commutative real algebraic geometry is well represented in the volume Other articles provide an overview of the way computational algebra is useful for analysis of contingency tables reconstruction of phylogenetic trees and in systems biology The contributions collected in this volume are accessible to non experts self contained and informative they quickly move towards cutting edge research in these areas and provide a wealth of open problems for future research
