## **Selected Papers Of Prof. Zhang Zhong:**

**Selected Papers of Professor Zhang Zhong-jun** Zhong-jun Zhang, Shun-tian Lou, 1990      **Selected Papers II, with Commentaries** Chen Ning Yang, 2013 This book is a collection of Professor Chen Ning Yang's personally selected papers 1971-2012 supplemented by his commentaries. Its contents reflect the professor's changing interests after he reached age sixty.

**Selected Papers Of Chen Ning Yang II: With Commentaries** Chen Ning Yang, 2013-05-10 Professor Chen Ning Yang, an eminent contemporary physicist, was Professor at the Institute for Advanced Study Princeton New Jersey from 1955 to 1966 and Albert Einstein Professor of Physics at the State University of New York at Stony Brook until his retirement in 1999. He has been Distinguished Professor at Large at the Chinese University of Hong Kong since 1986 and Professor at Tsinghua University Beijing since 1998. Since receiving his PhD from the University of Chicago in 1948, Prof. Yang has made great impacts in both abstract theory and phenomenological analysis in modern physics. In 1983 he published *Selected Papers 1945-1980 With Commentary*. It has been considered by Freeman Dyson as one of his favorite books. The present book is a sequel to that earlier volume. It is a collection of his personally selected papers 1971-2012 supplemented by his insightful commentaries. Its contents reflect Professor Yang's changing interests after he reached age sixty. It also includes commentaries written by him in 2011 when he is 89 years old. The papers and commentaries in this unique collection comprise a remarkable personal and professional chronicle shedding light on both the intellectual development of a great physicist and on the nature of scientific inquiry.

**Selected Papers of Kun Huang** Bang-fen Zhu, 2000 Professor Kun Huang is widely known for his collaboration with Max Born in writing the classic monograph *Dynamical Theory of Crystal Lattices*. During his years of active research, he has made important contributions to solid state physics. This collection of papers is selected at his own choice as representing his most influential works. Included is his work on the interaction of radiation field with polar lattices and the resulting coupled vibration modes later known as polariton; the systematic development of his theory of radiative and nonradiative multiphonon transition processes associated with lattice relaxation; his early prediction of diffuse X-ray scattering due to crystal defects; and his research works on low-dimensional semiconductor structures and more. Professor Huang has found by his experience that scientists interested in these papers often want to know more particulars underlying the research work, such as background motivation and rationale involved. Thus he was led to write a commentary which is published alongside the papers.

**Large Scale Systems** Bao Liu, Ting Chen, Y. P. Zheng, 1993 Hardbound This volume covering both the theoretical and applied aspects of large scale systems (LSS) presents both the state of the art and current trends of development. Ideas are also presented on reviving the growth of LSS and applying experience to industry and society. Subjects include data and interaction analysis, decomposition, partition, hierarchical and decentralized control, robustness and safety control, structures, reliability, conflict resolution, knowledge-based systems and others.

**Renmin Chinese Law Review** Shi, Jichun, 2021-08-27 *Renmin Chinese Law Review* Volume 8
