Güntzel-Lingner, I. Heinrich, D. Krahn, Dr. Lutz D. Schmadel, G. Zech, 2013-04-18 Astronomy and Astrophysics Abstracts which  
has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical  
publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a  
resolution adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a  
comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure  
that the average time interval between the date of receipt of the original literature and publication of the abstracts will not  
exceed eight months This time interval is near to that achieved by monthly abstracting journals compared to which our  
system of accumulating abstracts for about six months offers the advantage of greater convenience for the user Volume 18  
contains literature published in 1976 and received before March 1 1977 some older literature which was received late and  
which is not recorded in earlier volumes is also included      *Literature 1986, Part 1* Prof. Dr. Roland Wielen, S. Böhme, U.

*Energy And Mass In Relativity Theory* Lev Borisovich Okun, 2009-03-04 Energy and Mass in Relativity Theory presents  
about 30 pedagogical papers published by the author over the last 20 years They deal with concepts central to relativity  
theory energy  $E$  rest energy  $E_0$  momentum  $p$  mass  $m$  velocity  $v$  of particles of matter including massless photons for which  $v = c$   
Other related subjects are also discussed According to Einstein's equation  $E_0 = mc^2$  a massive particle at rest contains rest  
energy which is partly liberated in the nuclear reactions in the stars and the Sun as well as in nuclear reactors and bombs on  
the Earth The mass entering Einstein's equation does not depend on velocity of a body This concept of mass is used in the  
physics of elementary particles and is gradually prevailing in the modern physics textbooks This is the first book in which  
Einstein's equation is explicitly compared with its popular though not correct counterpart  $E = mc^2$  according to which mass  
increases with velocity The book will be of interest to researchers in theoretical atomic and nuclear physics to historians of

science as well as to students and teachers interested in relativity theory      Literature 1987, Part 2 U. Esser, H. Hefele, I. Heinrich, W. Hofmann, D. Krahn, V. R. Matas, L. D. Schmadel, G.
