Selected Topics In Statistical Theory:

Selected Topics in Statistical Theory Geoffrey S. Watson, 1971 **Lectures on Selected Topics in Statistical Mechanics** D. Ter Haar, 2013-09-03 Lectures on Selected Topics in Statistical Mechanics is a collection of lectures given at the 1971 Simla Summer School of Statistical Mechanics held in India The lectures explore a wide range of topics related to statistical mechanics including occupation number representation the Green function method the pair Hamiltonian model of an imperfect Bose gas fluctuations in a perfect Bose gas and the equation of state of an imperfect gas A simple derivation of the Bloch equation is also presented along with the statistical mechanics of stellar systems Comprised of eight chapters this volume begins with a discussion on the occupation number representation by considering some relevant formulae from ensemble theory Classical petit and grand ensembles are described together with quanta1 petit and grand ensembles Subsequent chapters focus on the Green function method in statistical mechanics the pair Hamiltonian model of the imperfect Bose gas and its solution in the absence of Bose Einstein condensation using Green function methods and diagrammatic techniques fluctuations in a perfect Bose gas the equation of state of an imperfect gas and a simple derivation of the Bloch equation Finally the statistical mechanics of stellar systems and an approach to equilibrium are described This book will be of interest to physicists *Mathematical Statistics* Peter .J. Bickel, Kjell A. Doksum, 2015-12-08 This package includes both Mathematical Statistics Basic Ideas and Selected Topics Volume I Second Edition as well as Mathematical Statistics Basic Ideas and Selected Topics Volume II Volume I presents fundamental classical statistical concepts at the doctorate level without using measure theory It gives careful proofs of major results and explains how the theory sheds light on the properties of practical methods Volume II covers a number of topics that are important in current measure theory and practice It emphasizes nonparametric methods which can really only be implemented with modern computing power on large and complex data sets In addition the set includes a large number of problems with more difficult ones appearing with hints and partial solutions for the instructor *Selected Topics in Statistical Theory* , 1971 [Selected Topics in Liquid Crystal Research](#) Hans-Dieter Koswig, 1990-12-31 No detailed description available for Selected Topics in Liquid Crystal Research **Selected Topics in Surface Electromyography for Use in the Occupational Setting** , 1992 *Selected Topics on Hydrogen Fuel* W. Sinha, 2024-09-11 This book focuses exclusively on the domain of parametric inference and that too from a reader s perspective i e covering only point estimation of parameter s It covers those topics in parametric inference which need clarity

of exposure to students researchers and teachers alike mere statements of theorems and proofs may not always reveal the inner beauty and significance of some aspects of inference To ensure clarity the book discusses the following topics at an advanced level 1 sequential unbiased point estimation of p and its functions generalization to trinomial and tetranomial populations 2 some aspects of the use of additional resources in finite population inference 3 the concept of sufficiency vis vis the notion of sufficient experiments and comparison of experiments 4 estimation of the size of a finite population with special features and 5 unbiased estimation of reliability in exponential samples and other settings This book provides a platform for thought provoking creative and challenging discussions on a variety of topics in statistical estimation theory it is also ideal for research methodology course for statistics research scholars and for clarification of basic ideas in topics discussed at basic advanced levels
