**German Self-Propelled Anti-Tank and Anti-Aircraft Guns, 1939-1945** Ian Baxter,2025-06-30 Self propelled anti tank and anti aircraft vehicles were a key element of the Nazi Army during the Second World War Anti tank weapons assumed great importance from the outbreak of war as combatants developed ever more effective armoured vehicles and tactics Some were little more than stopgap solutions such as mounting the weapons on a tracked vehicle to give enhanced mobility while others were more sophisticated designs Examples of the development of tank destroyer technology throughout the war are the Marders Jagdpanzer 38 and Nashorn In order to provide much needed fire power vehicles like the 5 ton Sd Kfz 6 halftrack mounted Soviet 76 2mm field guns The Marder series played a key role supporting armoured operations with their anti tank guns Anti aircraft firepower was vital to give protection to troops from increasingly potent Allied ground attack The Germans also mounted anti aircraft guns onboard halftracks such as the Sd Kfz 10 5 and 10 4 armed with 2cm Flak guns the medium Sd Kfz 7 1 halftrack mounting 2cm flak guns including quadruple flak guns on certain modified vehicles Later in the war there was the Flakpanzer 38 t with a 2cm flak gun an Sd Kfz 6 2 Flak halftrack and the Flakpanzer IV Wirbelwind with a rotating flak gun turret armed with quadruple 2cm flak guns In true Images of War style the authoritative text is superbly supported by well captioned contemporary images Self-propelled Anti-tank and Anti-aircraft Guns Peter Chamberlain,John Milsom,1975 *40M Nimrod Tank Destroyer and Armoured Anti Aircraft Gun* Attila Bonhardt,2019-04-19 The M40 NIMR D self propelled armored autocannon was constructed and redesigned by Hungarian engineers of Swedish origin This armored fighting vehicle was originally designed for antitank and antiaircraft role but from 1943 it was used against tanks and self propelled guns only for self defense However the NIMR D proved to be an excellent self propelled antiaircraft weapon and has been very effective in the fire support of own infantry units It was a real Hungarian Flakpanzer of WW2 *M42 Duster* David Doyle,2023-12-15 The M42 was an anti aircraft vehicle which was pressed into ground combat during the war Monthly Summary of Foreign Commerce of the United States ,1943

**Swedish armoured vehicles from 1920 until 1945** Péter Mújzer,2025-08-13 The Swedish Armoured Troops went through a huge enlargement during the war from having a few dozen light tanks to number almost 800 armoured vehicles at the end of the WW2 Between the wars the Swedish Army followed the pattern of the countries having fewer financial sources to build and modernise and operate its armed forces However the stable military industrial background and at the beginning the foreign especially German engineering design and development capacity helped the Swedish Army to be supplied by home designed and made armoured vehicles **Handbook on German Military Forces** United States. **Man-Machine-Environment System Engineering** Shengzhao Long, Balbir S. Dhillon, 2020-09-28. This book presents selected papers introducing readers to the key research topics and latest development trends in the theory and application of MMESE. The advanced integrated research topic man-machine-environment system engineering MMESE was first established in China by Professor Shengzhao Long in 1981 with direct support from one of the greatest modern Chinese scientists Xuesen Qian. In a letter to Shengzhao Long from October 22nd 1993 Xuesen Qian wrote: "You have created a very important modern science and technology in China. MMESE primarily focuses on the relationship between man-machine and environment, studying the optimum combination of man-machine-environment systems where man refers to people in the workplace, e.g. operators, decision makers; machine is the general name for any object controlled by man including tools, machinery, computers, systems and technologies; and environment describes the specific working conditions under which man and machine interact, e.g. temperature, noise, vibration and hazardous gases. The three goals of optimizing such systems are ensuring safety, efficiency and economy. Presenting interdisciplinary studies on the concepts and methods in physiology, psychology, system engineering, computer science, environmental science, management, education and other related disciplines, this book is a valuable resource for all researchers and professionals whose work involves MMESE subjects." **The**

Jagdpanther vs 17-pdr Achilles Frank Baldwin,2025-06-19 This is the story of the 17 pdr Achilles and the Jagdpanther two formidable tracked anti tank guns that clashed in North West Europe during 1944 45 Both mounting their country s most effective anti tank ordnance on a tracked chassis the 17 pdr Achilles and the Jagdpanther were arguably the best self propelled anti tank guns used by the British Canadian and German forces that fought in North West Europe during 1944 45 Featuring specially commissioned artwork and carefully chosen photographs this is the story of the two types development combat use and legacy in the closing stages of World War II in North West Europe Based upon the mobile lightly armoured M10 design originally developed for the US Army the Achilles had its main armament the 17 pounder QF anti tank gun mounted in a fully revolving turret Conversely the low profile heavily armoured Jagdpanther had its formidable 8 8cm PaK 43 cannon mounted in a fixed casemate Both crewed by artillerymen rather than tankers the Achilles and the Jagdpanther were anti tank guns not tanks or assault guns their main purpose was to knock out enemy tanks not to engage infantry or lead an assault or pursuit Sometimes they faced each other notably in the Reichswald fighting of February 1945 Fully illustrated this work tells the story of their development and tactical use as well as what happened when these two very different designs met in combat

**Red Army Auxiliary Armoured Vehicles, 1930-1945** Alexey Tarasov,2021-07-07 During the 1930s in the Soviet Union a remarkable range of auxiliary armoured vehicles were produced for the Red Army which have rarely had the attention they deserve and Alexey Tarasov s photographic history is the ideal guide to them These innovative designs demonstrate the diversity and innovation of the Soviet arms industry Among them were armoured flails ambulances bridge layers flame throwers and amphibious cars which prefigure similar designs made by western engineers during the Second World War As this selection of rare photographs shows Soviet designers were in many ways ahead of their time and it was short sighted internal policy and the shortcomings of Soviet industry which led to the cancellation or postponement of many of these promising projects As a result when faced with Operation Barbarossa in 1941 the Red Army lacked the auxiliary armour that would have helped to stem the German advance Alexey Tarasov s in depth research and the rare photographs he has assembled give a fascinating insight into a little known aspect of the history of Soviet armoured vehicles
