

2023 Clinical Radiology ST1 Self-Assessment

Guidance

As part of your application for Clinical Radiology ST1, you will be required to complete a self-assessment along with submitting supporting evidence to justify the score you choose.

You select the most appropriate option from the below 8 domains. You should use your discretion to choose the descriptor that best fits your own personal experience and achievements. All achievements should be dated after the commencement of your first relevant undergraduate degree, and in any case, within the last 10 years.

Scoring

For each domain, select one of the scores available. These scores are non-summative (i.e. if you match more than one descriptor within a domain, you cannot claim multiple). If you meet the requirements for more than one score, select the single highest which applies.

If an achievement legitimately may fit under multiple domains, it is valid to claim in both categories (for example, academic work which was presented orally then subsequently published).

Scores are final when the form is submitted; this means they cannot be edited in the event of a mistake, or an additional achievement completed after the deadline.

Completed Achievements Only

This self-assessment must be accurate at the time of submission. You should not include any achievement which is not fully completed, e.g. a degree which has not yet been awarded. Publications may be included if they are accepted by the journal, passed peer review, but remain "in press" or "pre-print". In this case evidence should include the acceptance letter from the relevant Editor. Presentations are only valid once actually given.

Over-claiming

You should be honest with your evaluation and not attempt to gain unfair advantage by exaggerating or misrepresenting achievements. If this is identified, it would represent a probity matter and could lead to outright rejection of your application, and in extreme cases, fitness to practice proceedings.

Scores are reviewed and, based on your evidence, can be revised up or down.

Please note, additional undergraduate degrees have been removed from scoring this year according to national policy for all medical and dental specialist recruitment.

Radiological Anatomy for FRCR Part 1 Philip

Borg, Abdul Rahman Alvi, 2010-09-16 The new FRCR part 1 Anatomy examination comprises 20 cases images with five questions about each The cases are labelled 01 to 20 and the five questions are labelled a to e The authors have set out to emulate this format by gathering 200 cases which from their experience are representative of the cases on which candidates will be tested The book consists of 10 tests with 20 cases each and 5 stem questions each The answers along with an explanation and tips accompany each test at the end of the chapter This will help candidates to identify the level of anatomical knowledge expected by the Royal College of Radiologists The aim of this book is not to replace the already

available literature in radiological anatomy but to complement it as a revision guide Whereas radiological anatomy atlases and textbooks provide images with labels for every possible identifiable structure in an investigation the cases in this book have only 5 labels simulating the exam

Handbook for Teachers in Universities and Colleges David Newble, Robert Cannon, 2013-10-15 First Published in 2000 This is the fourth edition of a handbook that has already become well known to many academic staff Its popularity rests on the way it presents ideas about teaching and learning underpinned by research findings but in a form that provides detailed helpful advice for teachers in higher education the Handbook could be used to support any of the many training programmes being introduced into colleges and universities around the world as indeed previous editions have already done The various chapters focus on the specific skills that are dealt with in such programmes large group and small group teaching methods of assessment and so on They also include advice on how to present conference papers an area where advice seems sorely lacking

Medical X-ray Photo-optical Systems Evaluation United States. Bureau of Radiological Health, 1975 For the past several years a small group within the Division which now constitutes the Image Analysis Section of the Medical Physics Branch has been developing analytical methodology for evaluating the imaging performance of medical diagnostic x ray systems This includes the development and evaluation of a wide variety of methods of analysis for appraising the health impact of radiation exposure Many aspects of this performance have substantial impact on the patient radiation dose required for a given amount of diagnostic information and on the amount and quality of that information which can be obtained As a result of our early work and studies of the literature in

this field we concluded that an international symposium devoted exclusively to this topic was in order This present volume represents the culmination of our efforts toward that end Kenneth E Weaver M S and Robert F Wagner Ph D of the Image Analysis Section and Assistant Professor David J Goodenough Ph D of The Johns Hopkins Medical Institutions
