Self Injurious Behaviors Assessment And Treatment:

Self-Injurious Behaviors Daphne Simeon, Eric Hollander, 2008-11-01 Throughout history people have invented many different ways to inflict direct and deliberate physical injury on themselves without an intent to die Even today the concept and practice of self injury is sanctioned by some cultures although condemned by most This insightful work fills a gap in the literature on pathologic self injury The phenomenon of people physically hurting themselves is heterogeneous in nature disturbing in its impact on the self and others frightening in its blatant maladaptiveness and often indicative of serious developmental disturbances breaks with reality or deficits in the regulation of affects aggressive impulses or self states Further complicating our understanding is the large and diverse scope of psychiatric conditions such as pervasive developmental disorders Tourette s syndrome and psychosis in which these behaviors occur This volume presents a comprehensive nosology of self injurious behaviors classifying them as stereotypic major compulsive and impulsive with greater emphasis on the last two categories because they are the most commonly seen The chapter on stereotypic self injurious behaviors highly repetitive monotonous behaviors usually devoid of meaning such as head banging focuses on the neurochemical systems underlying the various forms of stereotypic movement disorders with self injurious behaviors typically seen in patients with mental retardation and autism and discusses their psychopharmacological management The chapter on psychotic or major self injurious behaviors severe life threatening behaviors such as castration presents a multidimensional approach to evaluating and treating patients with psychosis and self injurious behaviors including the neuroanatomy and neurobiology of sensory information processing as background for its discussion of neurobiological studies and psychopharmacological treatments Chapters on the neurobiology of and psychopharmacology and psychotherapies for compulsive self injurious behaviors repetitive ritualistic behaviors such as trichotillomania hair pulling offer much needed biological research and the first empirical treatment studies on compulsive self injurious behaviors and argue that a distinction can indeed be made between compulsive and impulsive self injurious behaviors Chapters on the neurobiology psychopharmacology and dialectic behavior and psychodynamic theory and treatment of impulsive self injurious behaviors habitual chronic behaviors such as skin picking supplement the few neurobiological studies measuring impulsivity aggression dissociation and suicide and detail the efficacy of various medications and psychotherapies An eminently practical guide with exhaustive references to the latest data and research findings this concise volume contains clinical material and therapeutic interventions that can be used right away by clinicians to better understand and treat patients with these complex and disturbing behaviors Self-injurious Behavior James K. Luiselli, Johnny L. Matson, Nirbhay N. Singh, 2012-12-06 This volume addresses the topic of self injurious behavior SIB in per sons with developmental disabilities Among professionals and the lay public alike there is little debate over the seriousness of self injury its detrimental effects and the need for therapeutic intervention At the same time there are divergent views concerning its etiology and treat ment

Understanding the causes of self injury for example requires an analysis of biological factors socioenvironmental variables communication competencies and in complex clinical cases the interrelationships among these influences There is also uncertainty with regard to the function of self injury Put simply why would people willingly inflict injury upon themselves Finally although there is little disagreement about the necessity to intervene for self injury clinicians do not make uniform therapeutic recommendations and in fact considerable differences in treatment selection are common This fact is most apparent when one considers the ongoing controversy with regard to aversive and nonaversive programming Our premise for this volume is that a greater understanding of self injurious behavior is dependent upon an empirical research base Theories of causality must be conceptually valid and capable of being evaluated objectively Treatment must be functionally determined operationalized and replicable across personnel and settings For these reasons we have assembled chapters by individuals who are experienced clinicians and researchers in the fields of psychology medicine psychiatry education
