Problems of Semantics L. Tondl, 2012-12-06 Ladislav Tondl's insightful investigations into the language of the sciences bear directly upon some decisive points of confrontation in modern philosophy of science and of language itself In the decade since his Scientific Procedures was published in English Boston Studies 11 Dr Tondl has enlarged his original monograph of 1966 on the promise problems and achievements of modern semantics the main topic of his later work has been semantic information theory A Russian translation considerably expanded as a second edition was published in 1975 Moscow Progress Publishers with an appreciative critical commentary in the form of a conclusion by Professor Avenir I Uemov of Odessa Indeed many Soviet studies in the problems of the semantics of science show the same sort of philosophical curiosity about the relationship of meanings in scientific language to procedures in scientific epistemology that characterizes Tondl's work as in the work of Mirislav Popovich Kiev and Vadim Sadovsky Moscow and their colleagues But we know that interest in these matters is world wide ranging from such classical topics as sense and denotation empiricist reduction vagueness and denotational opacity to the new and equally exciting topics of the semantics of non unique preference choices the nuances of informational synonymity and the semantics of a picture shape so briefly but beautifully sketched in Tondl's dense and promising last chapter We are pleased to have had Tondl's kind cooperation in producing this English edition actually a third edition of his research about semantics

Semantic Problems of Translation. An Analysis of Driller and Kornelius' examination of semantic predicaments, 2023-07-19 Seminar paper from the year 2023 in the subject English Language and Literature Studies Linguistics grade 2.3 University of Wuppertal language English abstract This paper will revisit Driller and Kornelius' examination of the semantic predicaments inherent in translation Furthermore it will include an evaluative analysis of their findings and suggest potential remedies for circumventing such semantic obstacles in translation The objective of this term paper is to provide a broad overview of this subject matter how semantic problems in translation can be avoided and encourage further research in this field Due to the limited scope of this assignment it will not delve extensively into specific subfields of semantics I will provide a comprehensive analysis of the arguments presented by Driller and Kornelius followed by my critical evaluation Finally I will propose potential solutions to mitigate semantic issues in translation The problem of semantic difficulties in the process of translating is a matter of great importance in worldwide communication By conducting a thorough examination of the research carried out by Driller and Kornelius and offering practical solutions experts in language and translation can guarantee precise and culturally aware translations

Distributional Semantics Alessandro Lenci, Magnus Sahlgren, 2023-09-21 Distributional semantics develops theories and methods to represent the meaning of natural language expressions with vectors encoding their statistical distribution in linguistic contexts It is at once a theoretical model to express meaning a practical methodology to construct semantic representations a computational framework for acquiring meaning from language data and a cognitive hypothesis about the role of language usage in shaping meaning This book aims to build a common understanding of the theoretical and methodological foundations of distributional semantics Beginning with its historical origins the text exemplifies how the distributional approach is implemented in distributional semantic models The main types of computational models including modern deep learning ones are described and evaluated demonstrating how various types of semantic issues are addressed by those models Open problems and challenges are also analyzed Students and researchers in natural language processing artificial intelligence and cognitive science will appreciate this book Journal on Data Semantics IV

Kant and the Problem of Self-Knowledge Luca Forgiione, 2018-10-17 This book addresses the problem of self knowledge in Kant's philosophy As Kant writes in his major works of the critical period it is due to the simple and empty representation I think that the subject's capacity for self consciousness enables the subject to represent its own mental dimension This book articulates Kant's theory of self knowledge on the basis of the following three philosophical problems 1 a semantic problem regarding the type of reference of the representation I 2 an epistemic problem regarding the type of knowledge relative to the thinking subject produced by the representation I think and 3 a strictly metaphysical problem regarding the features assigned to the thinking subject's nature The author connects the relevant scholarly literature on Kant with contemporary debates on the huge philosophical field of self knowledge He develops a formal reading according to which the unity of self consciousness does not presuppose the identity of a real subject but a formal identity based on the representation I think
