

SEMANTICS

Semantics is the branch of linguistics that deals with studying meaning in language. It examines the meaning of words, phrases, sentences, and language.

OVERVIEW

Semantics looks at literal and implied meanings, the connotations words may carry, and how these meanings can change across different contexts. It also studies the relationships between words and phrases, like synonymy (words with the same or similar meanings), antonymy (words with opposite meanings), and polysemy (words or phrases with multiple, related meanings).

EXAMPLE

Interpreting Irony: Irony refers to when someone says one thing but means another, often conveying implied criticism or sarcasm. For example, if someone says, "What a great day!" while standing in pouring rain, this would be ironic because it implies disappointment with the current situation despite saying otherwise through their words.

Common Sense F. L. van Holthoorn, David R. Olson, 1987 NOTE Series number is not an integer n a *Semantic Typology and Commonsense Reasoning*, 1987 *The Semantics of Science* Roy Harris, 2005-04-15 The Semantics of Science proposes a radical new rethinking of science and scientific discourse Roy Harris argues that supercategories such as science art religion and history are themselves verbal constructs and thus language dependent Because each supercategory is constructed differently it is necessary to pay attention to the linguistic process by which a discourse such as science has developed Through this view it is possible to observe that the function of the supercategory is to integrate what would otherwise be separate activities and enquiries and the result of this integration is therefore a re drawing of the intellectual world that society as a whole adopts In the course of his study of The Semantics of Science Roy Harris looks at the history and development of scientific discourse to show through language that what is meant by science has changed since it was first theorised by the Greeks Harris traces the semantic development of science through the years of the Royal Society to the present day moving on to an analysis of rhetoric mathematics common sense and finally the supercategory of semantics This lucidly written yet radical new theory on the language of science will be fascinating reading for academics and students researching semantics semiotics or applied linguistics On believing. Commonsense Psychology Andrew S. Gordon, Jerry R. Hobbs, 2017-09-07 Commonsense psychology refers to the implicit theories that we all use to make sense of people s behavior in terms of their beliefs goals plans and emotions These are also the theories we employ when we anthropomorphize complex machines and computers as if they had humanlike mental lives In order to successfully cooperate and communicate with people these theories will need to be represented explicitly in future artificial intelligence systems This book provides a large scale logical formalization of commonsense psychology in support of humanlike artificial intelligence It uses formal logic to encode the deep lexical semantics of the full breadth of psychological words and phrases providing fourteen hundred axioms of first order logic organized into twenty nine commonsense psychology theories and sixteen background theories This in depth exploration of human commonsense reasoning for artificial intelligence researchers linguists and cognitive and social psychologists will serve as a foundation for the development of humanlike artificial intelligence Law, Ontologies and the Semantic Web Joost Breuker, 2009 Based on workshops and conferences on Artificial Intelligence AI and Law this work deals with legal ontologies and Semantic Web applications covering both theoretical aspects and practical systems Semantic Matchmaking with Nonmonotonic Description Logics S. Grimm, 2009-05-20 Semantic web has grown into a mature field of research Its methods find innovative

applications on and off the World Wide Web Its underlying technologies have significant impact on adjacent fields of research and on industrial applications This new book series reports on the state of the art in foundations methods and applications of semantic web and its underlying technologies It is a central forum for the communication of recent developments and comprises research monographs textbooks and edited volumes on all topics related to the semantic web In this first volume several non monotonic extensions to description logics DLs are investigated namely auto epistemic DLs circumscriptive DLs and terminological default rules all of which extend standard DL inference mechanisms by forms of closed world and default reasoning associated to common sense features A matchmaking framework is established for semantic resource descriptions formulated in the DL formalism that uses various DL inferences to judge resource compatibility Special emphasis lies on mapping the technical formalities of model theoretic semantics of DLs to more intuitive notions that abstract from the details of logic for the framework s easier adoption in applications The particular contributions of Semantic Matchmaking with Nonmonotonic Description Logics span the fields of non monotonic reasoning with description logics in artificial intelligence matchmaking of ontology based descriptions and semantic web service discovery A novel tableaux calculus for reasoning in circumscriptive DLs is introduced and it is demonstrated how the various nonmonotonic extensions to description logics can be used to realize common sense features and local closed world reasoning in a semantic web setting in general

Common Sense, Reasoning, & Rationality Renée Elio, 2002 While common sense and rationality have often been viewed as two distinct features in a unified cognitive map this volume engages with this notion and comes up with novel and often paradoxical views of this relationship

Meaning and Justification. An Internalist Theory of Meaning Gabriele Usberti, 2023-07-28 This volume develops a theory of meaning and a semantics for both mathematical and empirical sentences inspired to Chomsky s internalism namely to a view of semantics as the study of the relations of language not with external reality but with internal or mental reality In the first part a theoretical notion of justification for a sentence A is defined by induction on the complexity of A intuitively justifications are conceived as cognitive states of a particular kind The main source of inspiration for this part is Heyting s explanation of the intuitionistic meaning of logical constants In the second part the theory is applied to the solution of several foundational problems in the theory of meaning and epistemology such as Frege s puzzle Mates puzzle about synonymy the paradox of analysis Kripke s puzzle about belief the de re de dicto distinction the specific non specific distinction Gettier s problems the paradox of knowability and the characterization of truth On a more general philosophical level throughout the book the author develops a tight critique of the neo verificationism of Dummett Prawitz and Martin L f and defends a mentalist interpretation of intuitionism
