Yuan, Jeremy P. T. Ward, 2010-03-10 Membrane Receptors Channels and Transporters in Pulmonary Circulation is a proceeding of the 2008 Grover Conference Lost Valley Ranch and Conference Center Sedalia Colorado September 3-7 2008 which provided a forum for experts in the fields of those receptors channels and transporters that have been identified as playing key roles in the physiology and pathophysiology of the pulmonary circulation The book rigorously addresses recent advances in our knowledge of receptors channels and transporters and their role in regulation of pulmonary vascular

function ii how modulation of expression and function of receptors channels and transporters and their interrelationships contribute to the pathogenesis of pulmonary vascular disease and iii the therapeutic opportunities that may be revealed by enhancing our understanding of this area The overall goal was to explore the mechanisms by which specific receptors channels and transporters contribute to pulmonary vascular function in both health and disease and how this knowledge may lead to novel interventions in lung dysplasia pulmonary edema lung injury and pulmonary and systemic hypertension to reduce and prevent death from lung disease

Membrane Receptors Channels and Transporters in Pulmonary Circulation is divided into six parts Part 1 Ion Channels in the Pulmonary Vasculature Basics and New Findings is designated for basic knowledge and recent findings in the research field of ion channels in pulmonary circulation There are five chapters in Part I discussing the function expression distribution and regulation of various ion channels present in pulmonary vascular smooth muscle cells and how these channels are integrated to regulate intracellular Ca^{2+} and cell functions Part II TRP Channels in the Pulmonary Vasculature Basics and New Findings is composed of five chapters that are exclusively designed to discuss the role of a recently identified family of cation channels transient receptor potential TRP channels in the regulation of pulmonary vascular tone and arterial structure Part III Pathogenic Role of Ion Channels in Pulmonary Vascular Disease includes four chapters that discuss how abnormal function and expression of various ion channels contribute to changes in cell functions and the development of pulmonary hypertension Part IV Receptors and Signaling Cascades in Pulmonary Arterial Hypertension consists of five chapters devoted to the role of bone morphogenetic protein receptors Notch receptors serotonin receptors Rho kinase and vascular endothelial growth factor receptors in the development of pulmonary arterial hypertension Part V Receptors and Transporters Role in Cell Function and Hypoxic Pulmonary Vasoconstriction includes four chapters designed to illustrate the potential mechanisms involved in oxygen sensing and hypoxia induced pulmonary vasoconstriction and hypertension Part VI Targeting Ion Channels and Membrane Receptors in Developing Novel Therapeutic Approaches for Pulmonary Vascular Disease consists five chapters which discuss the translational research involving on membrane receptors channels and transporters including their potential as novel drug targets We hope that Membrane Receptors Channels and Transporters in Pulmonary Circulation will allow readers to foster new concepts and new collaborations and cooperations among investigators so as to further understand the role of receptors channels and transporters in lung pathophysiology The ultimate goal is to identify new mechanisms of disease as well as new therapeutic targets for pulmonary vascular diseases An additional outcome should be enhanced understanding of the role of these entities in systemic vascular pathophysiology since the conference will include researchers and clinicians with interests in both pulmonary and systemic circulations

The Lung Kent Pinkerton, Richard Harding, Charles Plopper, 2003-11-21 This unique book provides a concise account written by world authorities in their fields of how the mammalian lung grows and matures before birth and how the lungs and their ability to function well can be affected by the environment and by genetic

factors both before and after birth It provides an understanding of the basis of some major lung diseases affecting infants and children The book also deals with how the lung changes with age and how the process of lung aging can be affected by the environment Discusses the mechanisms that regulate the initial events of lung morphogenesis Provides a better understanding of the cellular and biochemical events involved in alveolarization Development of the pulmonary immune system and how the exposure to allergens during development may lead to diseases such as asthma Lung Injury Robert H. Notter, Jacob Finkelstein, Bruce Holm, 2005-04-20 Progressing from general scientific principles and concepts to in depth topical discussions of current research and treatment methods this comprehensive reference defines the cellular and molecular mechanisms contributing to inflammatory lung injury and repair Extensive coverage is provided on key mediators and pathways important in acute and chr General Thoracic Surgery Thomas W. Shields, Joseph LoCicero, Carolyn E. Reed, Richard H.
